INTRODUCTION

With **TRIMIT Pick and Reallocation,** the deliveries to the Customers can be managed.
Based on the open Sales Orders, the available quantities of Items and the Customers Allocation Priorities, the system can determine which Items can be delivered to the Customers.
Using the Reallocation function users can interfere in the automatic assignment of available quantities of Items to the different Sales Lines within a TRIMIT Pick Documents.

The **TRIMIT Pick Document** is in no way comparable with the **Inventory Pick** or **Warehouse Pick** from Business Central.
Based on a **TRIMIT Pick Document** you are however able to create the **Warehouse Shipment,** or an **Inventory Pick** based on the fields in your Location Code.

The audience for this document is the Consultant or very skilled User.
It will only describe the TRIMIT fields/functionality and not the standard Business Central fields/functionality.
Be aware of not changing settings and parameters in a live database without consulting the implementing partner.

The functionality described is the functionality as of **TRIMIT 24.1 for Business Central W1 BC24.X**.
The pictures in this White Paper are based on the demo database for **TRIMIT 24.1,** which is based on Microsoft Dynamics 365 Business Central 2024 Release Wave 1, in the demo company **CRONUS TRIMIT W1 Ltd.** (based on CRONUS International Ltd. of Microsoft Dynamics 365 Business Central).

6036780 trm Create Sales Order Pick
6036781 trm Create Pick Whse.

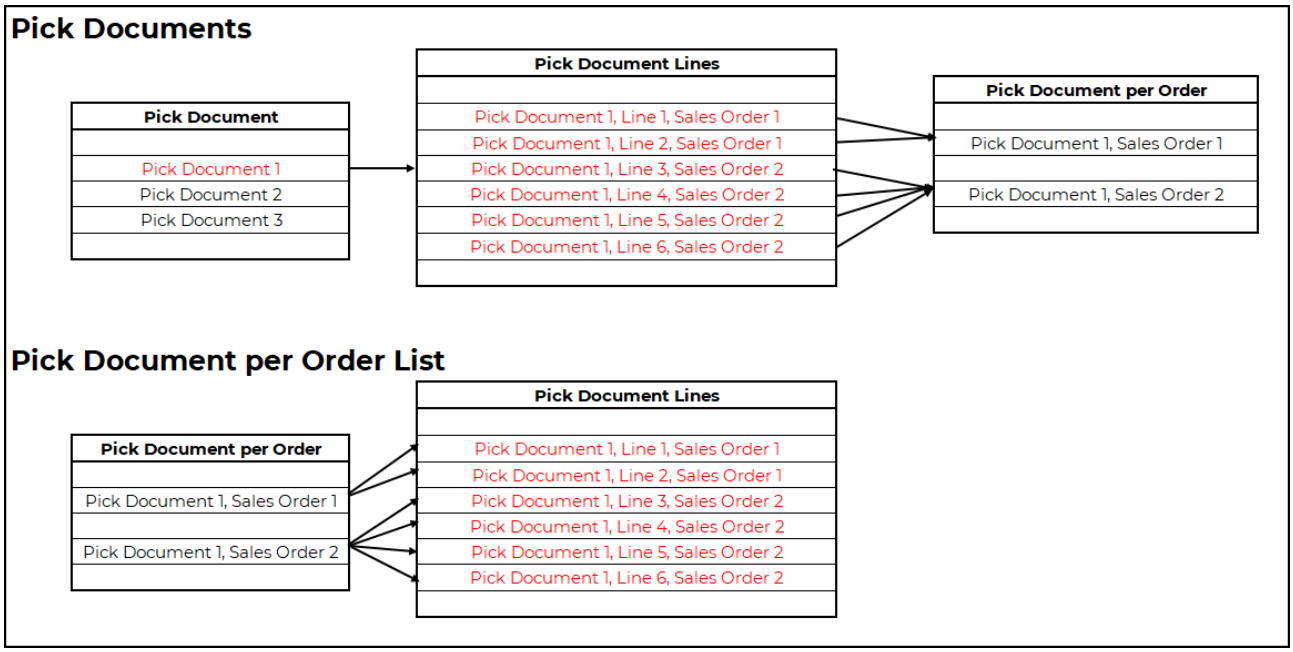
The codeunits
6036780 trm Pick Handling
6036781 trm Post Pick Intercompany

© TRIMIT SOLUTIONS A/S

The initiator of the TRIMIT Pick Document is the report ***Create Sales Order Pick*** that creates Pick Documents, TRIMIT Pick Document Lines and TRIMIT Pick Documents per Order according to the structure below. By posting of the TRIMIT Pick Document, the table data are transferred to corresponding tables for posted data of the Shipment (and Invoice depending on a parameter in Inventory Setup).

Create Sales Order Pick:

- Creates Pick Document Header
- Creates Pick Document Lines
- Creates Pick per Order



© TRIMIT SOLUTIONS A/S

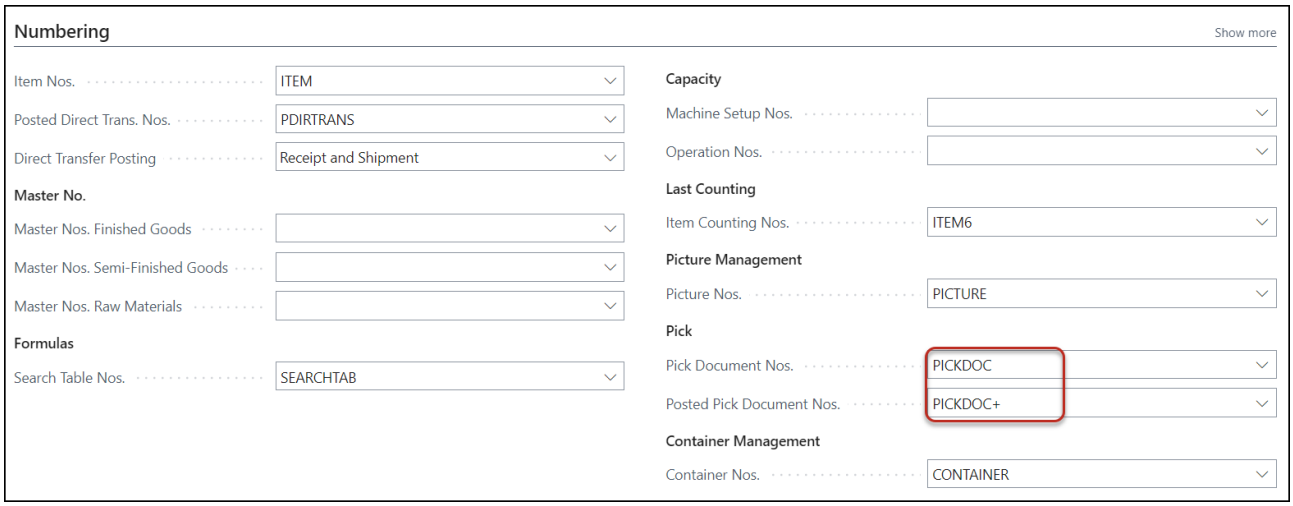
SETUPS

This chapter contains information about several setups that you need.

INVENTORY SETUP

Via **Search** *Inventory Setup,* you can open the **Inventory Setup** page, where you can find the following Parameters regarding the Pick and Reallocation Functionality.

FASTTAB NUMBERING



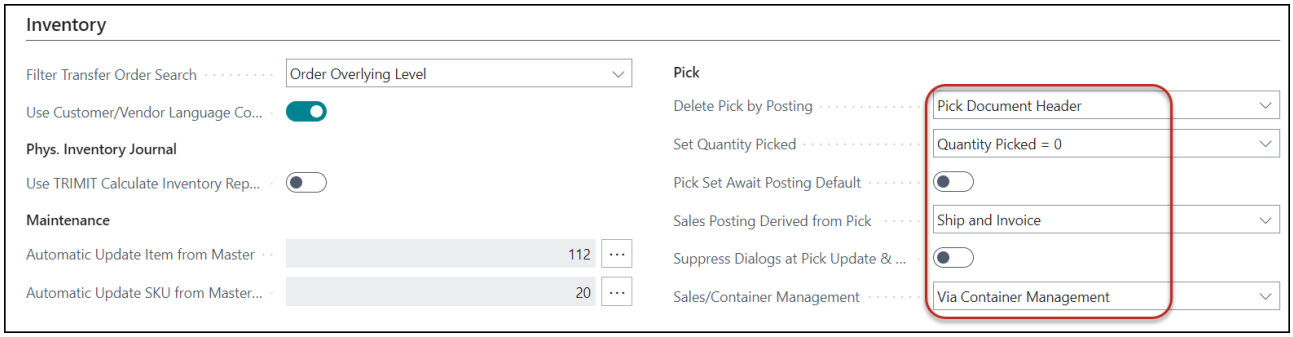
PICK DOCUMENT NOS.

The No. Series for the Pick Document numbers.

POSTED PICK DOCUMENT NOS.

The No. Series for the Posted Pick Document numbers.

FASTTAB INVENTORY



© TRIMIT SOLUTIONS A/S

DELETE PICK BY POSTING

This Parameter can be used to determine when **Pick Document Lines** shall be deleted.
You can choose between the following three options.

Pick Document Header	Pick Document Lines, Pick per Order and Pick Document Header will be deleted after posting, when all the Lines related to the Pick Document Header are posted.
Pick Document per Order	Pick Document Lines and Pick per Order will be deleted after posting, when all the Lines related to the Pick per Order (same Sales Order) are posted.
Pick Line	Pick Document Lines will be deleted concurrently after the posting. Pick Document per Order will be deleted after posting, when all Pick Document Lines related to the Pick Document per Order are posted and Pick Document Header will be deleted after posting, when all the Pick Document Lines related to the Pick Document Header are posted.

NOTE

If Pick Document Lines cannot be deleted because of a partly delivery, you always need to delete it manually.
The setting of this Parameter is also important when you determine for what level you want to create Pick Documents – per Customer, per Ship-To Code or per Master. This is managed in the Pick Limitations.

SET QUANTITY PICKED

This Parameter is used when creating **Pick Document Lines** and determines the method of reporting **Quantity Picked (Base)** back to the Pick Document Lines.
You can choose between the following two options:

Quantity Picked = 0	When a **Pick Document Line** is created, **Quantity Picked (Base)** will be set to *0* (zero) and must be updated before posting. You must choose this option if you are using Bar Codes for the picking, if you want to use the Reallocation function or if you also use the WMS functionality of standard Business Central.
Quantity Picked = Quantity to be Picked	When a **Pick Document Line** is created, **Quantity Picked (Base)** will be set the same value as **Quantity to be Picked (Base)**. At the same time, the field **Picked Quantity Updated** will be set to *Yes* and the Pick Document Line is ready to be posted. You can adjust **Quantity Picked (Base)** before posting the Line.

PICK SET AWAIT POSTING DEFAULT

Especially when using TRIMIT Intercompany, you might want to prevent the Pick Document in the sales company to be posted before the head office company has posted theirs.
That is why you can set this Parameter to *Yes,* so the field **Await Posting** in the Pick Document Line will get a checkmark by default, and you need to take extra actions (could also be a customized report) before the Pick Document Line can be posted. For more details, see ***White Paper – TRIMIT Intercompany*.**

SALES POSTING DERIVED FROM PICK

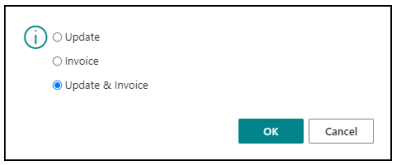
When posting a Pick Document Line, the system automatically posts the related Sales Order Line.
This Parameter is used to determine whether the posting of the Pick Document shall generate only Posted Sales Shipment or both Posted Sales Shipment and Posted Sales Invoice.

© TRIMIT SOLUTIONS A/S

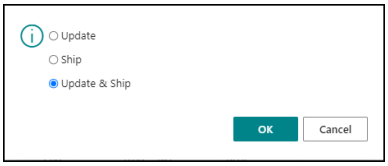
Ship and Invoice	Posting a Pick Document Line will create both a Posted Sales Shipment Line and a Posted Sales Invoice Line.
Ship	Posting a Pick Document Line will only create a Posted Sales Shipment Line.

SUPPRESS DIALOGS AT PICK UPDATE & POSTING

A checkmark in this Parameter will suppress the Dialog when posting a Pick Document Header or a Pick Document per Order:



or



It will automatically choose the third option *Update & Invoice* or *Update & Ship* depending on the content of the **Sales Posting Derived from Pick** Parameter.
This could be important if you want to add the posting of Pick Documents via a Job Queue or if you want to post several TRIMIT Pick Documents at once.

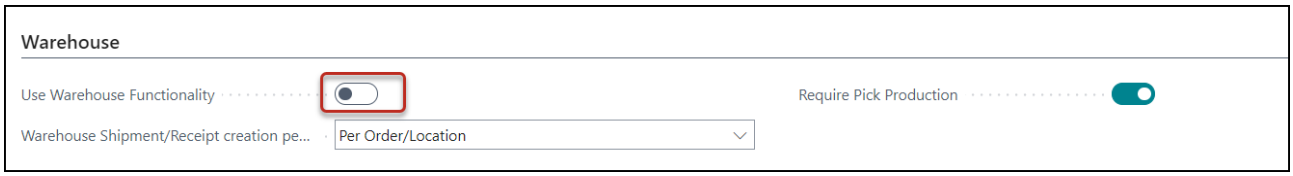
SALES/CONTAINER MANAGEMENT

With this Parameter, you can determine how you want to use the Container Management features for Sales. It has no influence on Purchase.
You can choose between the following two options:

Via Container Management	In the Container Management, you can select the Sales Lines and the quantities of the Sales Lines that are in a specific Container.
Via Pick	Container Nos. can be attached to a TRIMIT Pick Document Header. This means that all the picked quantities of a TRIMIT Pick Document will be in the same Container.

For more details, see ***White Paper – TRIMIT Container Management*.**

FASTTAB WAREHOUSE



USE WAREHOUSE FUNCTIONALITY

If this Parameter is *Yes,* you can use the advanced Microsoft Dynamics 365 Business Central WMS functionality in combination with the TRIMIT functionalities.
This will influence the Fields and Actions that you will see in several pages.

This Parameter cannot be set to *Yes* if you did not set the **Check Availability by Location** in the Sales & Receivables Setup to *Yes.*

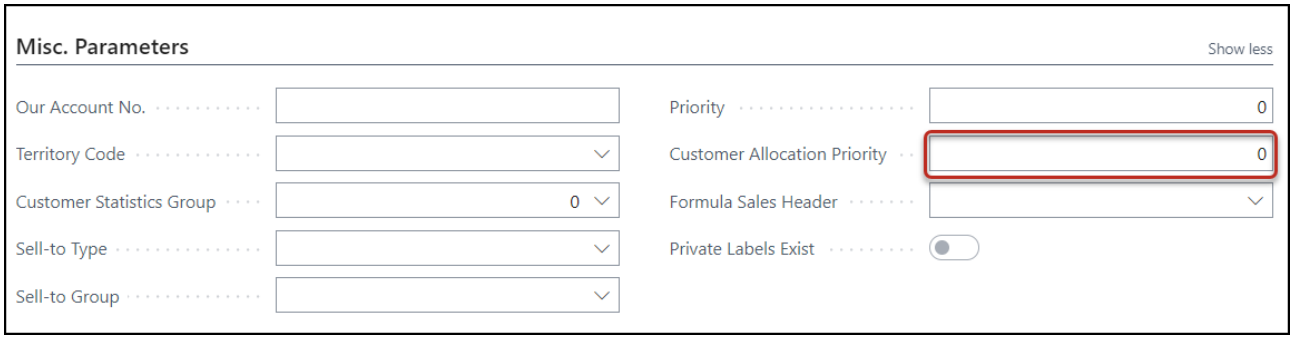
© TRIMIT SOLUTIONS A/S

CUSTOMER CARD

Via **Search** *Customers,* in the Customer Card, FastTab ***Misc. Parameters***, the following field is related to the Pick and Reallocation Functionality.

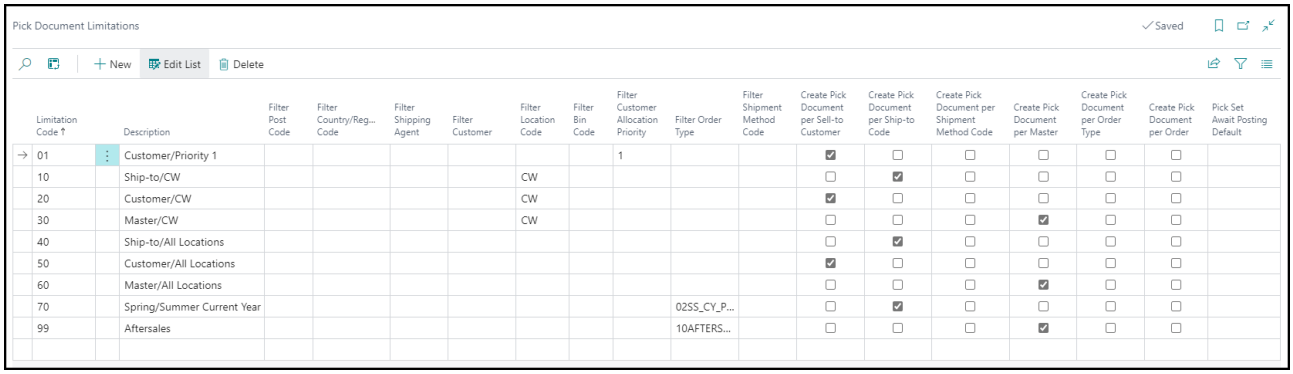
CUSTOMER ALLOCATION PRIORITY

Here you can set a ranking (an Integer) for your Customers, which will influence how the available quantity of Items is assigned to the Sales Orders.
In the report **Create Sales Order Pick Document** you can determine in which order the available quantity should be assigned to open Sales Order Lines: bases on **Order Date** (Ascending) / Sales Order No. (Ascending) or based on **Customer Allocation Priority** (Ascending) / Sales Order No. (Ascending).
0 is the highest priority, *9* is the lowest priority. This field can be overwritten in individual Sales Orders.



PICK DOCUMENT LIMITATIONS

Via **Search** *Pick Document Limitations,* you can find the **Pick Document Limitations**.
When creating Pick Documents, you can use the **Pick Document Limitations** to setup a combination of filters, that you regularly will use when creating Pick Documents and you determine for which level Pick Documents will be created.
If you do not create **Pick Document Limitations**, it means that all possible Sales Order Lines will be created as Pick Document Lines on 1 single Pick Document.



Limitation Code	Description	Filter Post Code	Filter Country/Reg... Code	Filter Shipping Agent	Filter Customer	Filter Location Code	Filter Bin Code	Filter Customer Allocation Priority	Filter Order Type	Filter Shipment Method Code	Create Pick Document per Sell-to Customer	Create Pick Document per Ship-to Code	Create Pick Document per Shipment Method Code	Create Pick Document per Master	Create Pick Document per Order Type	Create Pick Document per Order	Pick Set Await Posting Default

DESCRIPTION OF THE FIELDS

LIMITATION CODE

The Key field and Code of the Pick Document Limitation. New Codes can be inserted by clicking ***+New*.**

DESCRIPTION

Text field for a **Description** of the Limitation Code.

© TRIMIT SOLUTIONS A/S

FILTER POST CODE
This filter refers to the field **Ship-to Post Code** in the Sales Header.

FILTER COUNTRY/REGION CODE
This filter refers to the field **Sell-to Country/Region Code** in the Sales Header.

FILTER SHIPPING AGENT
This filter refers to the field **Shipping Agent Code** in the Sales Header.

FILTER CUSTOMER
This filter refers to the field **Sell-to Customer No.** in the Sales Header.

FILTER LOCATION
This filter refers to the field **Location Code** on the Sales Lines.

FILTER BIN
This filter refers to the field **Bin Code** on the Sales Lines.

FILTER CUSTOMER ALLOCATION PRIORITY
This filter refers to the field **Customer Allocation Priority** in the Sales Header.
This field on the Sales Header was default filled with the **Customer Allocation Priority** on the Customer Card but can be changed on individual Sales Orders.

FILTER ORDER TYPE
This filter refers to the field **Order Type** in the Sales Header.

FILTER SHIPMENT METHOD CODE
This filter refers to the field **Shipment Method Code** of the Sales Headers.

CREATE PICK DOCUMENT PER SELL-TO CUSTOMER

☐	All Pick Document Lines will be created on the same **Pick Document No**.
☑	Per **Sell-To Customer No.** in the Sales Header within the filters a new **Pick Document No.** will be created

CREATE PICK DOCUMENT PER SHIP-TO CUSTOMER

☐	All Pick Document Lines will be created on the same **Pick Document No**.
☑	Per **Sell-To Customer No.** + **Ship-To Code** in the Sales Header within the filters a new **Pick Document No.** will be created

CREATE PICK DOCUMENT PER SHIPMENT METHOD CODE

☐	All Pick Document Lines will be created on the same **Pick Document No**.
☑	Per **Shipment Method Code** in the Sales Header within the filters a new **Pick Document No.** will be created

CREATE PICK DOCUMENT PER MASTER

☐	All Pick Document Lines will be created on the same **Pick Document No**.
☑	Per **Master** in the Sales Lines within the filters a new **Pick Document No.** will be created

© TRIMIT SOLUTIONS A/S

CREATE PICK DOCUMENT PER ORDER TYPE

☐	All Pick Document Lines will be created on the same **Pick Document No**.
☑	Per **Order Type** in the Sales Header within the filters a new **Pick Document No.** will be created

Be aware, that if you want to prioritize a specific Order Type (like pre-sales) over another Order Type (like aftersales), it is better to use the **Filter Order Type** and run the creation of Pick Documents several times with different **Limitation Codes**.

CREATE PICK DOCUMENT PER ORDER

☐	All Pick Document Lines will be created on the same **Pick Document No**.
☑	Per **Order** within the filters a new **Pick Document No.** will be created

PICK SET AWAIT POSTING DEFAULT

This field will overrule the field in the **Inventory Setup**.
Specifically regarding TRIMIT Intercompany but could also be used in a normal company.

Setting this field to *Yes*, means that created Pick Document Lines will get a checkmark in the field **Await Posting**, meaning that the Pick Document Lines cannot be posted until this field is set to *No.*
This needs to be done with an extra customized report in which you can setup your own rules.
Regarding Intercompany: see ***White Paper – TRIMIT Intercompany***

COMPANY

If you enter the Name of a Company in this field, only for this Company, the Pick Documents will be created.
This field is not by default visible; you need to add it via ***Personalize.***

This field can be used especially regarding **TRIMIT Intercompany** and creating Pick Documents in the *Headquarter*, in which you i.e., first might want to create Pick Documents for the *Headquarter* and in a second run the Pick Documents for the *Subsidiaries*.
For more details, see the ***White Paper – TRIMIT Intercompany*.**

NOTE 1

You can make different combinations:
If **Pick Document per Sell-To Customer** and **Pick Document per Ship-To Customer** are ☑ it means:
Per Sell-To Customer+Ship-To Code, a Pick Document will be created.
This is the same outcome as when you only have a *Yes* on the Ship-To Customer.

If **Pick Document per Sell-To Customer** and **Pick per Master** are ☑ it means:
Per Sell-To Customer+Master, a Pick Document will be created.

If **Pick Document per Ship-To Customer** and **Pick per Master** are ☑ it means:
Per Sell-To Customer+Ship-To Customer/Master, a Pick Document will be created.

NOTE 2

Especially if **Create Pick Document per Master** is set to ☑, it will give you the opportunity to re-allocate assigned Inventory over the Sales Orders after the Pick Documents have been created. See Reallocation for more details.

© TRIMIT SOLUTIONS A/S

PICK AND REALLOCATION PROCESS

The Pick and Reallocation Process can be split into the following steps:

1) Create the Pick Document Nos.
   Based on the Sales Orders you can create TRIMIT Pick Document Nos. using **Create Sales Order Pick Document**. You can use the **Pick Document Limitations** to determine what can be combined on the same TRIMIT Pick Document No.
2) Maintain the assigned quantities to pick ➔ Reallocation!
   Then you have the option to see what is on the TRIMIT Pick Documents in two different views: **Pick Documents** and **Pick Document per Order List**
3) In all views you can change the quantities that are assigned to the different Sales Lines and use the functionality for Reallocation.
4) Choose the Item Tracking Lines to the Pick Document Lines (if applicable)
5) Create the **Warehouse Shipment** or **Inventory Pick** (if applicable)
6) Post the Pick Document Nos. - if not already posted via 5)

When the goods are picked, you can post the Pick Document No. (or parts of it).
Based on the option when posting (*Ship* or *Ship & Invoice*) the Shipment will be posted and the Invoice will be created and posted.

NOTE 1
The TRIMIT Pick Document is in the beginning in no way related to the standard Warehouse Shipments, Warehouse Picks or Inventory Picks from Business Central.
You can however create a **Warehouse Shipment** or **Inventory Pick** based on a Pick Document.
In that case, the TRIMIT Pick Document will become more a pick proposal that can be influenced and will become the base for further WMS actions.

NOTE 2
In case you might also have installed **Tasklet Factory**, it is important to install also the **TRIMIT Development AS_TRIMIT AddOn Mobile WMS** App, which can be found on our Partner Portal if you want to use the **TRIMIT Pick Document per Order** for picking Items via **Tasklet Factory** instead of picking **Sales Order Lines** or (WMS) **Pick Lines**.

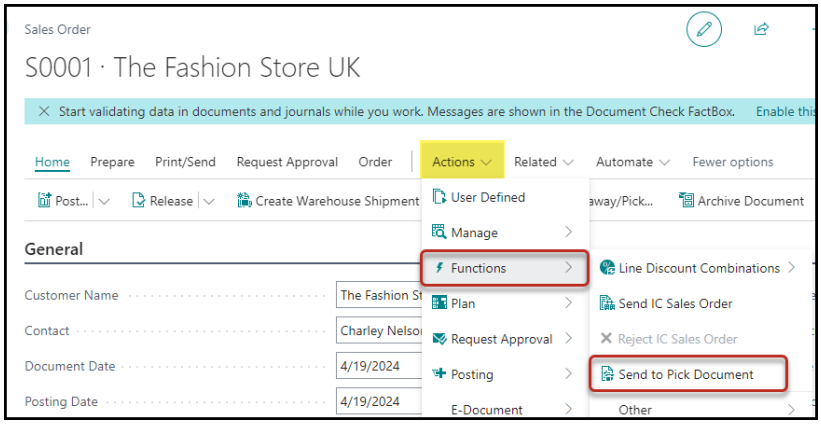
NOTE 3
In case the Sales Line has a **Related Order No.** the **Quantity to be Picked** on the Pick Document will be based on:

- **Quantity Finished** of a **Related Production Order** – **Quantity Shipped** on the **Sales Line**.
- **Quantity Received** of a **Related Purchase Order – Quantity Shipped** on the **Sales Line**.
- **Quantity** of a **Posted Purchase Receipt** - **Quantity Shipped** on the **Sales Line**.
  This in case the **Related Purchase Order** has been Received (and Invoiced) – in that case, the **Related Purchase Order** might be deleted already.

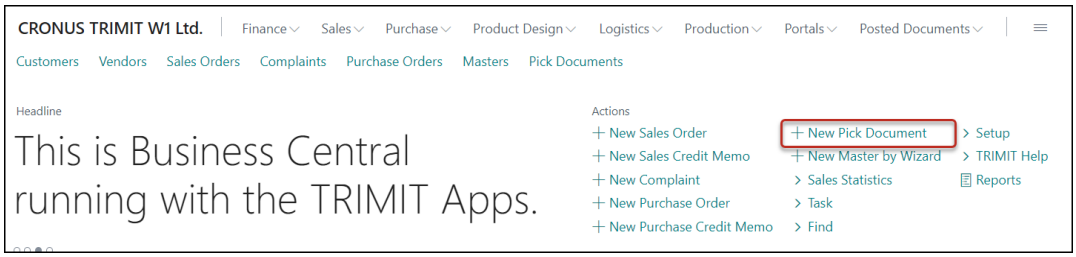
© TRIMIT SOLUTIONS A/S

CREATE PICK DOCUMENTS

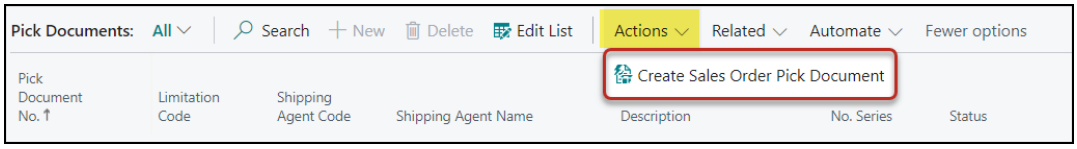
There is the possibility to create a Pick Document directly via a specific Sales Order via ***Actions, Functions, Send to Pick Document*** after which you will get the question if you want to create a Pick Document for *Available Lines* or *All Lines.*



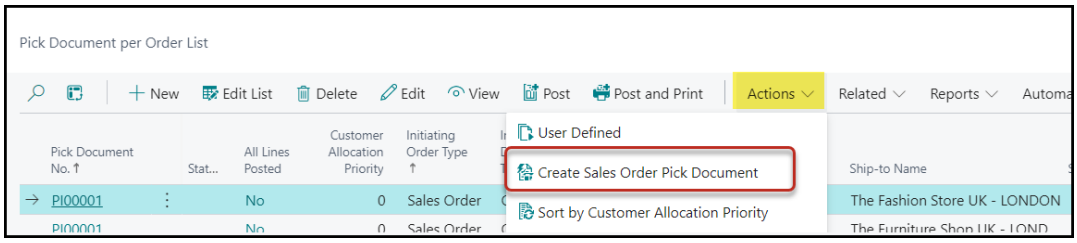
You can also use a report to create many Pick Documents in one process:
Via **Search** *Create pick* you can find the Report **Create Sales Orders Pick Document**.
This report is also added to the **Role Center (Profile)** *TRM_SB TRIMIT Small Business* as the action ***+ New Pick Document:***



The third option to create Pick Documents is via the Pick Documents List, ***Actions, Create Sales Order Pick Document***.



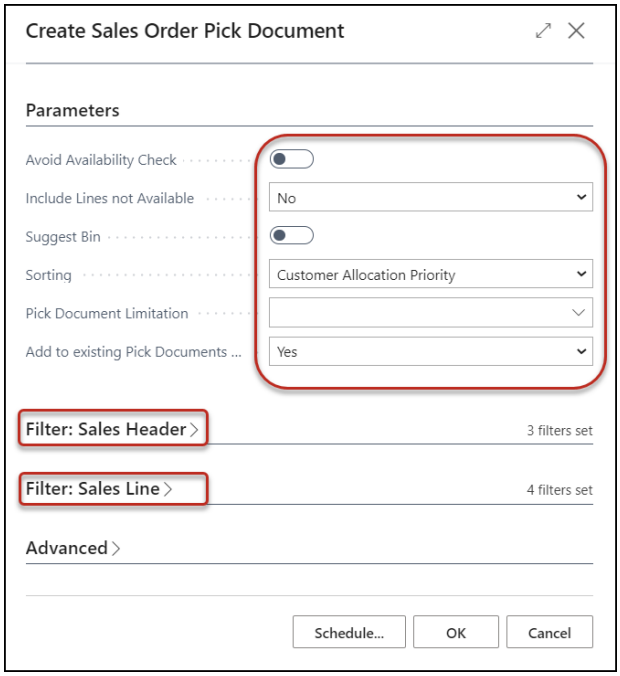
The fourth option to create Pick Document is via the Pick Document per Order List, ***Actions, Create Sales Order Pick Document.***



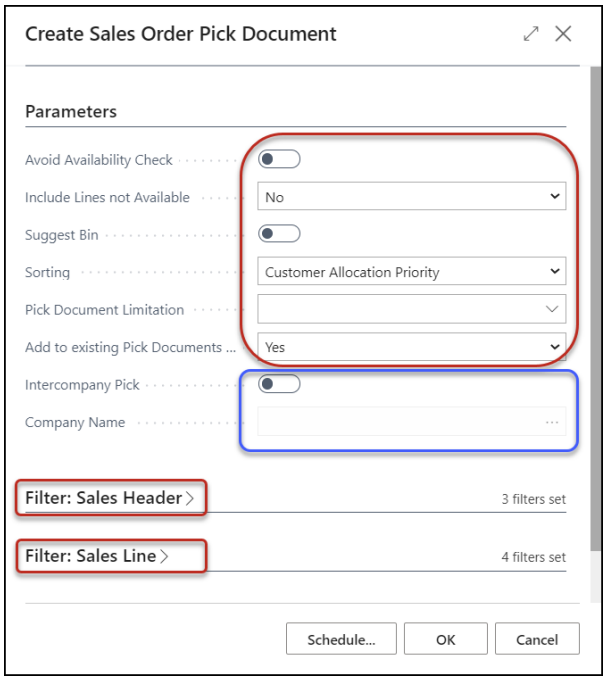
© TRIMIT SOLUTIONS A/S

NOTE
Creating Pick Documents will be based on Sales Orders with **Status** *Released* if the parameter **Use Warehouse Functionality** in the Inventory Setup is set to *Yes.*
Creating Pick Documents will be based on Sales Orders with **Status** *Open* or *Released* if the parameter **Use Warehouse Functionality** in the Inventory setup is set to *No.*

In the Report, you can set some Parameters and Filters on Sales Headers and Sales Lines.



or



NOTE
The right Request Page is only applicable in a TRIMIT Intercompany Structure in the *Headquarter* where in the **Intercompany Relation** of a *Subsidiary* the field **Intercompany Pick** has been set to *Yes.*
For more details, see ***White Paper – TRIMIT Intercompany***.

DESCRIPTION OF THE FIELDS

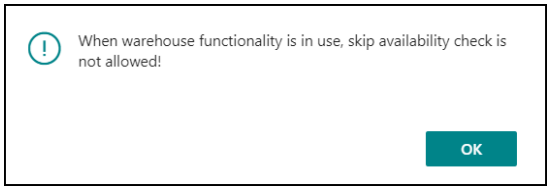
AVOID AVAILABILITY CHECK

The availability check for creating Pick Documents differs from standard TRIMIT Availability Check.
The Pick availability check is simply a check of **Quantity to be Picked** compared to the current **Inventory Quantity – Quantity to be Picked** on existing **Pick Document Lines**.

☐	Availability check is conducted and only Sales Lines (within the Filters) for which there is enough Inventory – existing Pick Document Lines will be created as Pick Document Lines
☑	Availability check is avoided and for all Sales Lines (within the Filters) Pick Document Lines will be created.

NOTE
Avoid Availability Check must **not** be set, if you use a Location Code on your Sales Lines, in which the **Require Shipment** or **Require Pick** is set to *Yes.* In that case, you would get an error message, if you enter a checkmark in the parameter:

© TRIMIT SOLUTIONS A/S



INCLUDE LINES NOT AVAILABLE

If **Avoid Availability Check** is ☐, you could get many created Pick Document Lines, for which no quantities are available. This field determines if you want to see these Zero-Lines (the **Quantity to be Picked** and **Quantity Picked** will be Zero).

You can choose between the following five options:

No	Sales Lines with no availability will not be created as Pick Document Lines
All	All Sales Lines with no availability will be created as Pick Document Lines with 0 in Quantity to Pick
Master Inventory > 0	Only Sales Lines with no availability, for which the Master (so all Items of the Master) does have Inventory, will be created as Pick Document Lines with 0 in Quantity to Pick
Y-Axis Inventory > 0	Only Sales Lines with no availability, for which the Master + Y-Axis (in fashion usually per color) does have Inventory, will be created as Pick Document Lines with 0 in Quantity to Pick
Item Inventory > 0	Only Sales Lines with no availability, for which the Item does have Inventory, will be created as Pick Document Lines with 0 in Quantity to Pick

SUGGEST BIN

This field is only applicable if you do not use the full functionality of WMS but do have a checkmark in the field **Bin Mandatory** of the **Location Code** from a Sales Line.

In that case, when receiving Purchase Orders or Finishing Production Orders, you need to enter a **Bin Code.** A checkmark in this field can then suggest the **Bin Code** in the Pick Document Lines. This can also result in more than one Pick Document Line for the same Sales Line with different **Bin Codes.**

☐	The system will not suggest the **Bin Code** in the Pick Document Lines, based on the **Bin Content.**
☑	The system will suggest the **Bin Code** in the Pick Document Lines, based on the **Bin Content.** This can also lead to several Pick Document Lines related to the same Sales Line.

SORTING

In this field you can determine in which sorting the Sales Lines will be checked to assign the available Inventory. In case of a TRIMIT Intercompany Structure, it is a Sorting over all the companies.

You can choose between the following three options:

Customer Allocation Priority	The Sales Lines will be sorted per **Customer Allocation Priority** and **Order Date** of the Sales Header to assign the available Inventory for creating the Pick Documents.
Order Date	The Sales Lines will be sorted per **Order Date** of the Sales Header to assign the available Inventory for creating the Pick Documents.
Alternative Sorting	The Sales Lines will be sorted per **User Defined Sorting No.** of the Sales Header to assign the available Inventory for creating the Pick Documents.

© TRIMIT SOLUTIONS A/S

NOTE

Before assigning the available Inventory to create the Pick Documents, a temporary Table is filled: ***6036335 trm Temp. Pick Priority*** based on the filtered Sales Lines**.**

If you want to make use of the *Alternative Sorting*, you need to develop an event, to fill the **Alternative Sorting** field in the ***Temp. Pick Priority*** table based on your own criteria. This field is an Integer.

I.e., based on Credit Limit, the record in the ***6036335 trm Temp. Pick Priority*** might be deleted or get a high Integer for the **Alternative Sorting.**

You can find the calling of this event already in the Codeunit ***6036780 trm Pick Handling***:

```
AL PickHandling.Codeunit.al 3 ×
src > src > AL PickHandling.Codeunit.al > Codeunit 6036780 "trm Pick Handling" > GenPickOnBasisOfSale(var salesHeader_par: Record 36 "Sal
1    Codeunit 6036780 "trm Pick Handling"
83       procedure GenPickOnBasisOfSale(var salesHeader_par: Record "Sales Header"; var salesLine_par: Recor
161          if intercompanySetup_loc.FindSet then
162              repeat
163                  GenPickPriorityList(
164                      salesHeader_par,
165                      salesLine_par,
166                      tempPickPriorityTemp_loc,
167                      intercompanySetup_loc."Related Company");
168              until intercompanySetup_loc.Next = 0;
169
170          Pf_OnAfterPriorityListCreated(tempPickPriorityTemp_loc);
171
172          if GuiAllowed then
173              Window.Close;
```

PICK DOCUMENT LIMITATION

The Code of the **Pick Document Limitations** as described in the section Pick Document Limitations.

The Limitation Setup can work in three separate ways:

A Limitation Code is entered	The **Pick Document Limitation** works as a predefined filter, and Pick Document Nos. and Pick Document Lines are created according to the chosen Pick Document Limitation
Blank without records in the Pick Document Limitations	All records within the filters of the Report (Sales Header, Sales Lines) will be attached to the same Pick Document No.
Blank with records in the Pick Document Limitations	This creation of the Pick Document Nos. runs through all the **Pick Document Limitations** from top down and creates Pick Document Nos. according to the individual setups of the Pick Document Limitations. Example (a simple setup): Limitation 1 : Location Code filter = BLUE Limitation 2 : Location Code filter = RED Result: 3 Pick Document Nos. in Total: 1 Pick Document No. for Location Code BLUE 1 Pick Document No. for Location Code RED 1 Pick Document No. for the Pick Document Lines with different Location Codes than RED and BLUE

© TRIMIT SOLUTIONS A/S

	If you also entered, that Pick Document Nos. should be created per **Sell-To Customer**, the system will create Nos. per **Sell-To Customer** per **BLUE**, **RED** and **other Location Codes**. When using the Pick Document Limitations in this way it is important to have the correct path through the Limitations, especially when multiple fields are in use per Limitation.

ADD TO EXISTING PICK DOCUMENTS WHERE STATUS=BLANK

If Pick Document Lines will be created for the Sales Lines: can Sales Lines be added to existing Pick Documents if the **Status** of the Pick Document = *Blank.*
You can decide to do this, if existing Pick Documents have not yet been given to the employees in the warehouse, so can still be changed based on a new calculation of what to be picked.

INTERCOMPANY PICK

This option will only be shown if there is an **Intercompany Relation** with **Relation Type** is set to *Create IC Sales (Automatic)* and **Intercompany Pick** is set to *Yes.*

This Parameter determines if Intercompany Pick Documents should be created.
This means, that in a TRIMIT Intercompany Structure, when creating Pick Documents in the *Headquarter* Company, also (Intercompany) Pick Documents can be created in the *Headquarter* Company for Sales Orders that are in the *Subsidiary*.
In that case, in the Intercompany Relations of the *Headquarter,* the *Subsidiary* needs to have a **Relation Type** of *Create IC Sales (Automatic)* and a checkmark in **Intercompany Pick**.

☐	No Pick Documents will be created for related companies in a TRIMIT Intercompany Structure.
☑	Pick Documents will be created for related companies in a TRIMIT Intercompany Structure if the field **Intercompany Pick** in the **Intercompany Relation** is set to *Yes.*

COMPANY NAME

This option will only be shown if there is an **Intercompany Relation** with **Relation Type** is set to *Create IC Sales (Automatic)* and **Intercompany Pick** is set to *Yes.*

If Parameter **Intercompany Pick** is *Yes,* you can select a Company within the TRIMIT Intercompany Structure for which you want to create the Pick Documents.
That could be the current company (i.e., only the *Headquarter*) or a related company (i.e., a *Subsidiary*) for which **Intercompany Pick** in the Intercompany Relations has been set to *Yes.*

More details regarding this Intercompany Pick procedure are described in the ***White Paper – TRIMIT Intercompany***.

© TRIMIT SOLUTIONS A/S

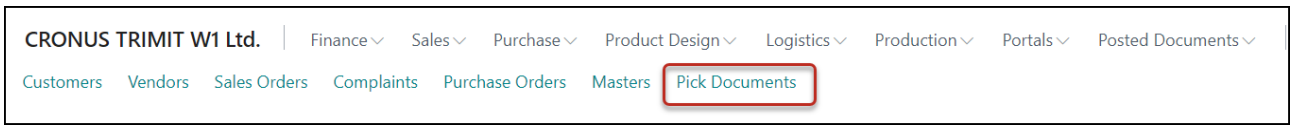
MAINTAIN THE PICK DOCUMENT NOS.

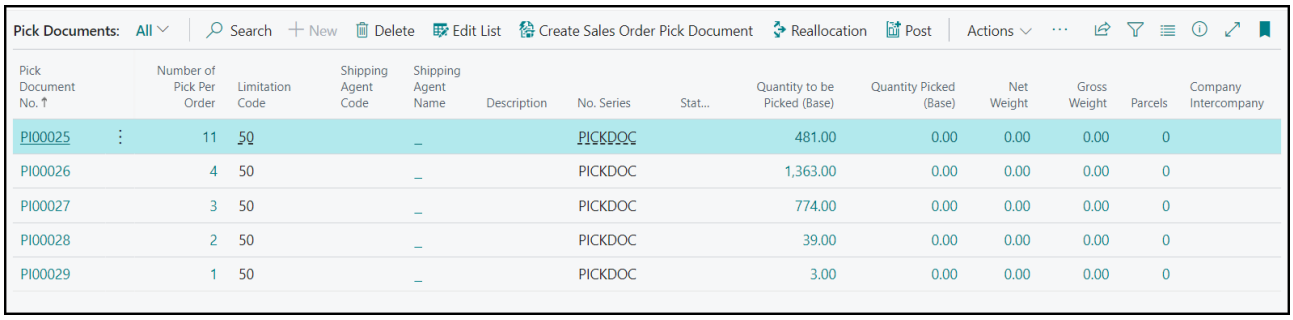
After the Pick Document Nos. have been created, you can maintain the Pick Document Lines.
This can be done in different pages:

- **Pick Documents**: It will show all the Pick Document Nos. first, and then all the created Pick Document Lines of a Pick Document No. when you go into the Card of a Pick Document No.
- **Pick Document per Order List**: It will show lines per Pick Document/Initiating Order No. (Sales Order), and then only the Pick Document Lines related to a Pick Document No. and a Sales Order when you go into the Card of a Line in this list.

PICK DOCUMENTS

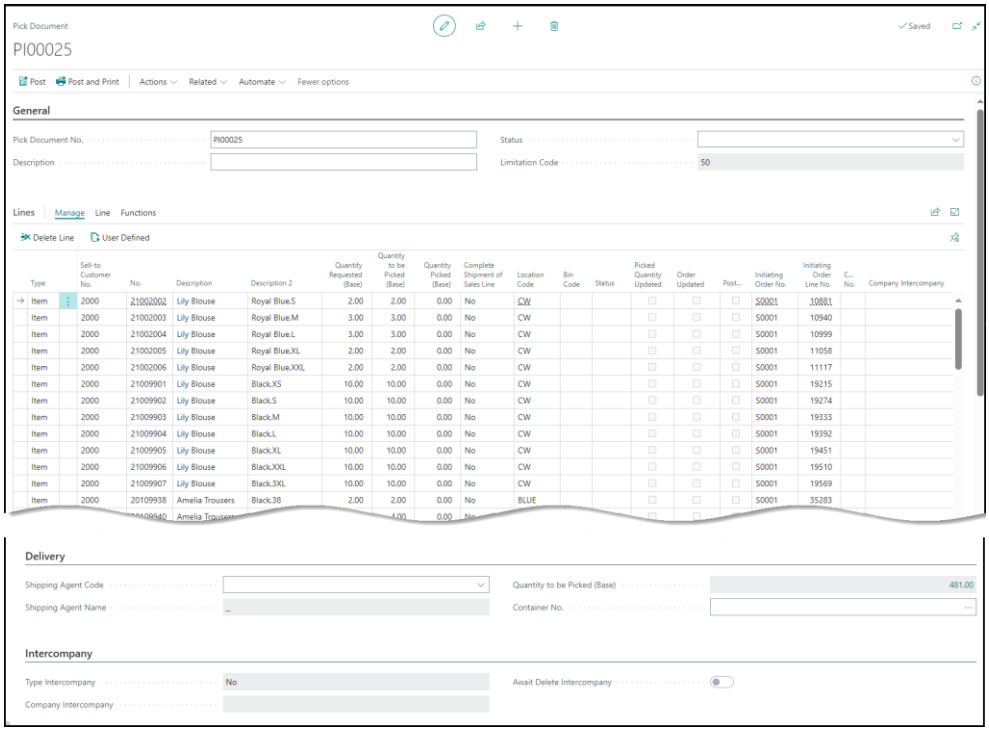
Via **Search** *Pick Documents,* you can find the page of all the Pick Document Nos.
It can also be found directly in the **Role Center** (Profiles) *TRM_SB TRIMIT Small Business.*





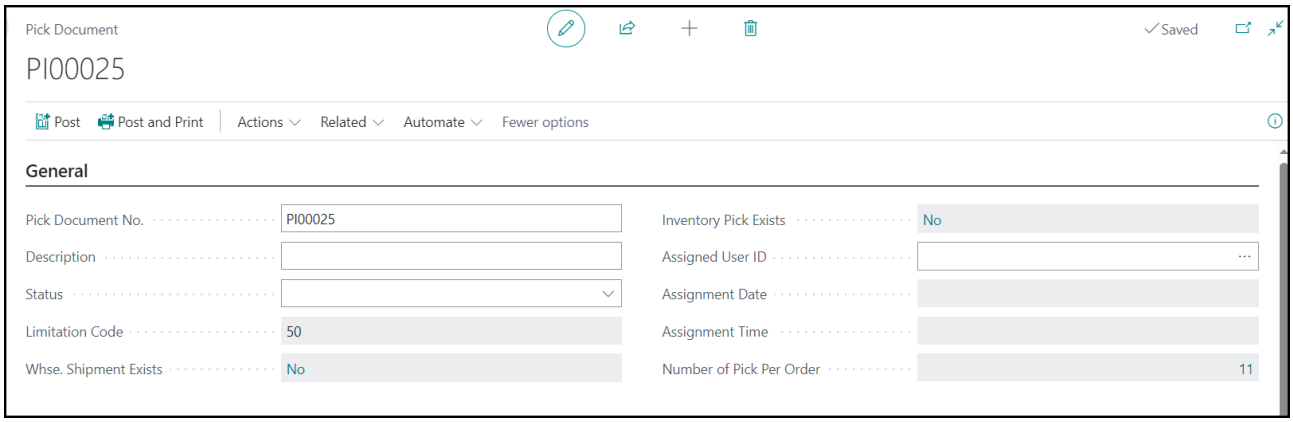
No. of Pick per Order has been added via **Personalize**.

Click on one of the shown Lines, will result in an overview of all the Pick Document Lines in the **Pick Document No.**



© TRIMIT SOLUTIONS A/S

FASTTAB GENERAL



PICK DOCUMENT NO.

The unique Number for this Pick Document.

DESCRIPTION

Default empty. You can enter a Description for this Pick Document.

STATUS

This field will only be set automatically (to *Ready to Post)* in case of using the TRIMIT Intercompany Structure when the Pick Documents in the *Headquarter* are posted, and therefore the related Pick Documents in the *Subsidiary* are also *Ready to Post*.
Otherwise, you can change it manually so you can use it for keeping track of the Status of your Pick Documents.
The available values are ***blank***, ***Planned***, ***In Progress, Ready to Post*** and ***Completed***.
When the value of this field is changed to a higher value, the **Status** of the related Pick Document Lines will automatically be updated for all lines with lower Status value.
If the value of this field is changed to a lower value, you will be asked whether you want the **Status** of the related Pick Document Lines set to the new lower value.

Therefore, it is up to you to determine what the different values of the **Status** mean.
An example:

Blank	New created Pick Document
Planned	You could create a Pick Document to make a hard reservation of the Inventory for a specific Customer/Sales Order. In that case, the quantities on Inventory are not available for other Pick Documents anymore. This could be a situation to use the value *Planned* for.
In Progress	The Pick Document is now in the Warehouse and is now being picked.
Ready to Post	Goods are picked. Therefore, some of the Pick Document Lines can be posted. In case of TRIMIT Intercompany: Pick Documents in the *Headquarter* have been posted, and therefore, the related Pick Documents in the *Subsidiary* can be posted.
Completed	The Pick Document has been physically picked and can now be posted.

The meaning described above can however be whatever you want to use it for!

© TRIMIT SOLUTIONS A/S

LIMITATION CODE

The **Pick Limitation Code** that has been chosen when the Pick Document has been created, or the **Pick Limitation Code** that has been determined during creation of the Pick Document. This cannot be changed.

WAREHOUSE SHIPMENT EXISTS

This field will only be visible if **Use Warehouse Functionality** in the Inventory Setup is set to *Yes.*
This field will be set automatically to *Yes* if a **Warehouse Shipment** has been created based on this Pick Document.

INVENTORY PICK EXISTS

This field will only be visible if **Use Warehouse Functionality** in the Inventory Setup is set to *Yes.*
This field will be set automatically to *Yes* if an **Inventory Pick** has been created based on this Pick Document.

The following four fields are not shown by default in the page, but you can add them via ***Personalize***:

ASSIGNED USER ID

In this field, you can enter the **User** that will pick the Items of this Pick Document in the Warehouse.

ASSIGNMENT DATE

Will be filled automatically when you fill the **Assigned User ID**.

ASSIGNMENT TIME

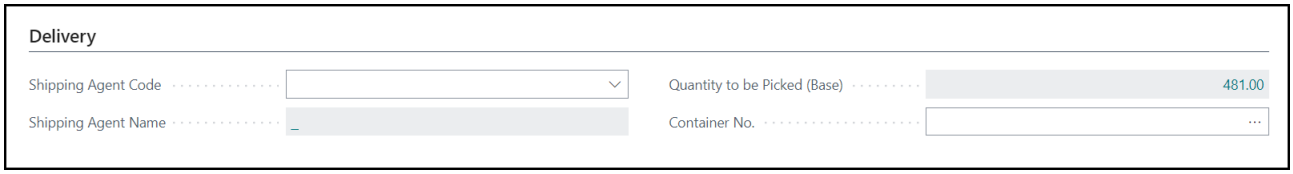
Will be filled automatically when you fill the **Assigned User ID**.

NOTE
The above three fields will also be copied to the Pick Document Lines, Pick per Order, and if applicable also to the Warehouse Shipment Header and Inventory Pick Header.
After a Warehouse Shipment or Inventory Pick might have been created, you are not able to change the **Assigned User ID** anymore.

NUMBER OF PICK PER ORDER

This will show the number of Sales Orders that are in this Pick Document Lines.

FASTTAB DELIVERY



SHIPPING AGENT CODE

This is the **Shipping Agent Code** for this Pick Document and can be changed. This field will also be copied to the Posted Shipment when you post the Pick Document.

SHIPPING AGENT NAME

The Name of the chosen **Shipment Agent Code** will be shown.

© TRIMIT SOLUTIONS A/S

QUANTITY TO BE PICKED (BASE)

The total Quantity that can be picked on this Pick Document – the sum of all **Quantity to be Picked (Base)** from the Lines.

CONTAINER NO.

Here you can enter a **Container No.** in which the goods of this Pick Document will be shipped. This is only possible if Parameter **Sales/Container Management** in the Inventory Setup is set to *Via Pick***.**
In that case, also the **Container No.** in the Pick Documents Lines will be updated. This means that all the Lines will be in the same Container.

NOTE
For a detailed description of how you can use the **Container No.** please look at the ***White Paper – TRIMIT Container Management.***

FASTTAB INTERCOMPANY

*All three fields are only applicable in a TRIMIT Intercompany Structure. For more details regarding the process Intercompany Pick: see **White Paper – TRIMIT Intercompany.***

TYPE INTERCOMPANY

This field will be set automatically by the system.
There are three options:

No	If the current company is not part of a TRIMIT Intercompany Structure or if there are no **Intercompany Relations** with **Intercompany Pick** set to *Yes.*
Warehouse	If the current company is the selling company within a TRIMIT Intercompany Structure i.e., *Headquarter,* and there are **Intercompany Relations** with *Subsidiary(s)* with **Intercompany Pick** set to *Yes*
Sales	If the current company is the receiving company within a TRIMIT Intercompany Structure i.e., *Subsidiary,* and there is an **Intercompany Relation** with the *Headquarter* with **Intercompany Pick** set to *Yes*

COMPANY INTERCOMPANY

This field will be set automatically, in the *Headquarter* within a TRIMIT Intercompany Structure, by the system. It will show the name of the Company for which this (Intercompany) Pick Document is created. This will not be the current Company *Headquarter*, but the name of one of the *Subsidiary(s)*.
In that case, the information on the Lines is related to Sales Orders in that specific *Subsidiary.*
This field will only be filled if you created **Intercompany Picks** in the *Headquarter* Company.

AWAIT DELETE INTERCOMPANY

This field will be set automatically by the system.
This field will get a checkmark when you Post the Pick Document No. in the *Headquarter* and there is a corresponding Pick Document No. in the *Subsidiary*.
It prevents deleting the Pick Document in the *Headquarter* before the corresponding Pick Document in the *Subsidiary* has been posted.

*Some of the fields shown in above picture are not shown by default but need to be added via **Personalize** if you want to see/use them.*

NOTE

In case you have set the Parameter **Use Warehouse Functionality** in the Inventory Setup to *Yes,* and the Location Code of the Pick Document Line is set for **Require Shipment** or **Require Pick**, you can only change the **Quantity Picked (Base)** indirectly via a created **Warehouse Shipment** or **Inventory Pick.**
In that case, the field **Quantity Picked (Base)** – and several other fields - cannot be changed manually on the Pick Document Line.

TYPE

While creating the Pick Document Lines during the report ***Create Sales Order Pick Document*** this field will always be set to *Item.*

SELL-TO CUSTOMER NO. AND SHIP-TO CODE

The **Sell-to Customer No.** and **Ship-to Customer** are based on the corresponding fields from the original Sales Line and cannot be changed.

CUSTOMER ALLOCATION PRIORITY

The **Customer Allocation Priority** of the Sales Order and cannot be changed.

NO., DESCRIPTION AND DESCRIPTION 2

The **No.** will always be an Item from the original Sales Line and cannot be changed.
Also, the **Description** and **Description 2** are copied from the original Sales Line and cannot be changed.

QUANTITY REQUESTED (BASE)

This is the remaining Quantity of the original Sales Line and cannot be changed.

QUANTITY TO BE PICKED (BASE)

This is the quantity that the employee in the warehouse should pick. This quantity is calculated based on the available quantity for the picks (Inventory – quantity on other Pick Document Nos.). This quantity can be changed manually.
The suggested quantity depends on the Filters and Parameters of the ***Create Sales Order Pick Document*** report. You could run the report so that you get Pick Document Lines for all requested quantities, not only available quantities. However, **Quantity to be Picked (Base)** will be set to zero at the unavailable lines.

© TRIMIT SOLUTIONS A/S

DIFFERENCE ON QUANTITY (BASE)

This is a calculated field based on **Quantity Requested (Base)** – **Quantity to be Picked (Base**) and cannot be changed.

QUANTITY PICKED (BASE)

This is the quantity that really is picked in the warehouse to be shipped to the customer.
You can change this quantity manually or you can use the function as described below under Set Picked Quantity = Quantity to Pick
This quantity can already during the creation of the Pick Document Nos. be set automatically based on the Parameter Set Quantity Picked in the **Inventory Setup.**

This field cannot be changed if **Warehouse Handling Type** is *Whse. Shipment* based on the fields of the **Location Code** of the Pick Document Line.

DIFFERENCE ON PICKED QUANTITY (BASE)

This is a calculated field based on **Quantity to be Picked (Base) – Quantity Picked (Base)** and will be calculated after changing the **Quantity Picked (Base)** (manually or via the **Warehouse Shipment** or **Inventory Pick**) and cannot be changed.

COMPLETE SHIPMENT OF SALES LINE

You can set this field manually if i.e., you do not ship all the **Quantity to be Picked (Base),** but you will not ship the rest anymore.
This field will also be set automatically to *Yes* in case you have created a **Warehouse Shipment** or **Inventory Pick** that has been handled completely and the **Quantity Picked (Base)** will be the same as the **Quantity to be Picked (Base).**

LOCATION CODE

The **Location Code** is based on the **Location Code** from the original Sales Line and cannot be changed.

BIN CODE

The **Bin Code** can be filled with the **Bin Code** of the **Sales Line** or the **Bin Code** on which the Item **No.** has a content automatically.
You can change this **Bin Code** manually to a **Bin Code** with content in the **Location Code.**

STATUS

The field **Status** is set automatically by the System but can be changed.
You can choose between the following five options:

Blank	A new Pick Document Line, in which the **Quantity Picked (Base)** will still be zero.
Planned	When you fill the **Bin Code** the **Status** can be set to *Planned* automatically. When you create a **Warehouse Shipment** or **Inventory Pick** the **Status** can be set to *Planned* automatically. You can set the **Status** manually to *Planned.* I.e., when you handover the Pick Document to a Warehouse Employee so it can be picked, or when the information might be exported to a Handheld Device for scanning.
In Progress	When the **Quantity Picked (Base)** is filled, the **Status** will become *In Progress* automatically. This **Status** can however also be set manually.

© TRIMIT SOLUTIONS A/S

Ready to Post	When you click ***Post,*** and only choose *Update* (so no Posting Shipment or Invoice), the **Status** will be set automatically to *Ready to Post.* This **Status** can however also be set manually. I.e., when you filled the **Quantity Picked (Base)** and you are transporting the goods to your customer.
Completed	After posting the Pick Document, the **Status** can be set to *Completed* automatically. You can set the **Status** manually to *Completed*. I.e., when the goods are delivered to the customer.

PICKED QUANTITY UPDATED

The System will set this field to *Yes* automatically *when* you fill the **Quantity Picked (Base).**

ORDER UPDATED

The System will set this field to *Yes* automatically when you **Update** the Sales Line of the Pick Document Line. This can be done by clicking ***Post*** or ***Post and Print*** of the **Pick Document** or **Pick Document per Order** and by choosing *Update*, *Update & Ship* or *Update & Invoice*

POSTED

The System will set this field to *Yes when* you **Post** the Pick Document.
This can be done by clicking ***Post*** or ***Post and Print*** of the **Pick Document** or **Pick Document per Order** and by choosing *Ship, Update & Ship, Invoice* or *Update & Invoice*

WAREHOUSE HANDLING TYPE

This will only be visible if **Use Warehouse Functionality** in the Inventory Setup is set to *Yes.*
The System will automatically fill it when you create the Pick Documents: *Blank , Whse. Shipment* or *Invt. Pick* depending on the fields in the **Location Code.**

QUANTITY ALLOCATED TO PICK (BASE)

This is a calculated field based on the **Quantity** that has been created on a Warehouse Shipment Line or on an Inventory Pick Line.

INITIATING ORDER NO.

The **Initiating Order No**. is the Sales Order on which the current Pick Document Line is based and cannot be changed.

INITIATING ORDER LINE NO.

The **Initiating Order Line No**. is the Sales Order Line on which the current Pick Document Line is based and cannot be changed.

CONTAINER NO.

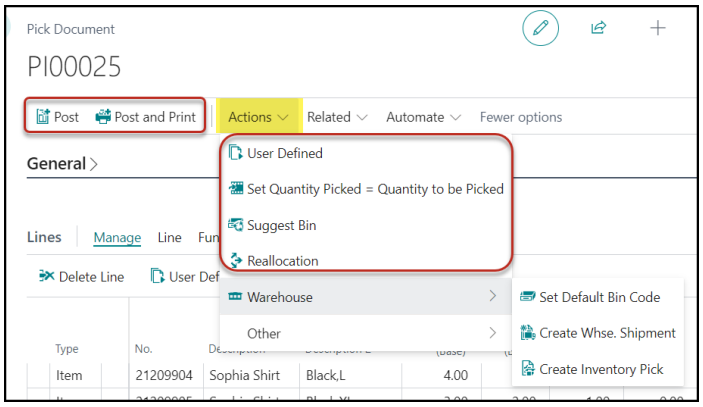
The System will fill the **Container No.** automatically when you create an Outbound Container and attach the Sales Lines to it or if you fill the **Container No.** in the Pick Document, FastTab ***Delivery.***
For more details, see ***White Paper – TRIMIT Container Management***

COMPANY INTERCOMPANY

This field is only applicable in a TRIMIT Intercompany Structure and will be filled by the Company Name of the Company for which the Pick Document Lines are created.
For more details, see ***White Paper – TRIMIT Intercompany***

© TRIMIT SOLUTIONS A/S

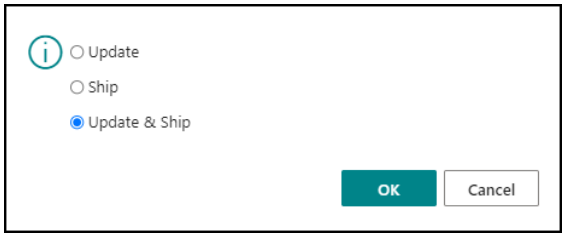
ACTIONS FOR THE PICK DOCUMENT



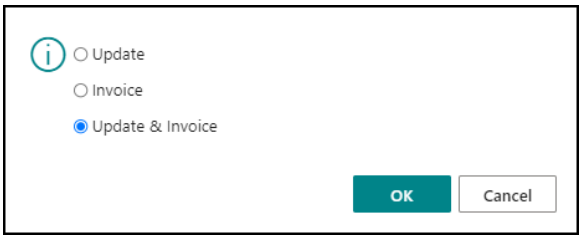
POST (F9)

All Pick Document Lines will be posted based on the **Quantity Picked (Base)**.

The options:



or



These options Dialogs will only be shown if the field Suppress Dialogs at Pick Update & Posting parameter in the Inventory Setup is set to *No.* Which options Dialog will appear, depends on the setting in the Sales Posting derived from Pick parameter in the Inventory Setup.

You can choose between the following three options if Sales Posting derived from Pick is *Ship*:

Update	The **Qty. to Ship** on the Sales Lines is set with the **Quantity Picked** of the Pick Document Line and the field **Order Updated** on the Pick Document Line will be set to *Yes*.
Ship	All Pick Document Lines with the **Order Updated** field set to *Yes,* will be posted as a Shipment.
Update & Ship	Both above mentioned actions are conducted

You can choose between the following three options if Sales Posting derived from Pick is *Ship & Invoice*:

Update	The **Qty. to Ship** and **Qty. to Invoice** on the Sales Lines are set with the **Quantity Picked** of the Pick Document Line and the field **Order Updated** on the Pick Document Lines will be set to *Yes*.
Invoice	All Pick Document Lines with the **Order Updated** field set to *Yes,* will be posted as a Shipment and as an Invoice.
Update & Ship	Both above mentioned actions are conducted

POST AND PRINT (Shift+F9)

The same as Post (F9) , but now also the Posted Shipment or Posted Invoice will be printed according to the Report Selections Sales to the default windows printer of the user.

© TRIMIT SOLUTIONS A/S

NOTE 1

When using these ***Post*** Actions of the Pick Document, all the Lines of the Pick Document No. will be posted.
If you only want to post the lines of a particular Sales Order within the Pick Document, you can use the Functions of the Action Pane of the Lines: see Line Action Pane / Functions or Post it via the Pick Document per Order.

NOTE 2

If you post all the Lines of the Pick Document the Pick Document will be deleted.
The Posted Pick Documents however can be found via **Search** *Posted Pick Documents*

NOTE 3

If you post a Pick Document that contains more than 1 Sales Order: per Sales Order a Posted Shipment will be created when you post the Pick Document completely.

NOTE 4

Pick Document Lines will be deleted after posting based on the parameter **Delete Pick by Posting** in the Inventory Setup.

SET QUANTITY PICKED = QUANTITY TO BE PICK

This function will update **Quantity Picked (Base)** on the Pick Document Lines with **Quantity to be Picked (Base)** if the field **Order Updated** is *No*.
After you have executed this Action, the **Status** in the Pick Production Lines will be set to *In Progress* and the **Picked Quantity Updated** will be set to *Yes.*

NOTE

If you want to see the view of Pick Document per Order List: Do not post the Pick Document at this point.
If you also want to see the **Reallocation** for the Sales Orders on your Pick Document: Do not post the Pick Document at this point.
Or make a backup of your company; so, you can use this situation again.

SUGGEST BIN

This action is only applicable if **Use Warehouse Functionality** in the Inventory Setup is set to *No,* and you use a simple setup for the Bin Codes.
It can fill the **Bin Code** on the Pick Document Lines, based on the Bin Content by Bin Ranking that was created while posting a Receipt of a Purchase Order or Finishing a Production Order.

REALLOCATION

Will be described in a next chapter Reallocation

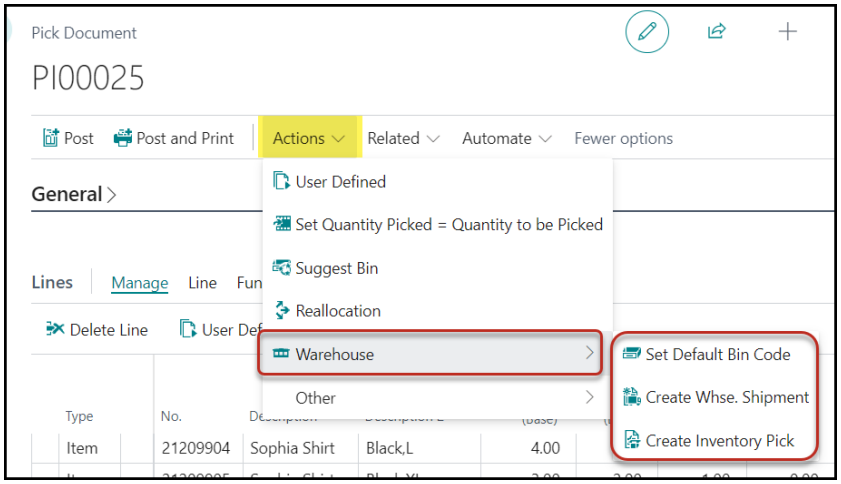
NOTE

Make sure you reallocate, before using the actions ***Suggest Bin, Set Default Bin Code, Create Whse. Shipment, Create Inventory Pick***.

© TRIMIT SOLUTIONS A/S

ACTIONS, WAREHOUSE FOR THE PICK DOCUMENT

This will only be visible if **Use Warehouse Functionality** in the Inventory Setup is set to *Yes.*



SET DEFAULT BIN CODE

If the field **Bin Mandatory** in the **Location Code** is set to *Yes,* and the field **Directed Put-Away and Pick** in the **Location Code** is set to *No,* this action can fill the **Bin Code** on the Pick Document Lines with the **Default Bin Code** for the Item that can be set while posting a Receipt of a Purchase Order or Finishing a Production Order.

CREATE WHSE. SHIPMENT

If the field **Warehouse Handling Type** is *Whse. Shipment* – which was set while creating the Pick Document Lines based on the fields in the **Location Code**, this action can create a **Warehouse Shipment** with Pick Document Lines of this Pick Document.
The **Status** of the Pick Document Lines will be set to *Planned.*

CREATE INVENTORY PICK

If the field **Warehouse Handling Type** is *Invt. Pick* – which was set while creating the Pick Document Lines based on the fields in the **Location Code**, this action can create an **Inventory Pick** with Pick Document Lines of this Pick Document.
The **Status** of the Pick Document Lines will be set to *Planned.*

PICK DOCUMENT PER ORDER (Shift+F7)

This will open the page **Pick Document per Order** for all Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document No.

MAIN ORDER

This will open the page **Sales Order Card** for the Sales Order (**Initiating Order No.**) of the Line that you are standing on.

© TRIMIT SOLUTIONS A/S

WHSE. SHIPMENT LINES

This function will only be shown if Parameter **Use Warehouse Functionality** in the Inventory Setup is *Yes.* You will get an overview of all the **Warehouse Shipment Lines** that are connected to all Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document No.

INVT. PICK LINES

This function will only be shown if Parameter **Use Warehouse Functionality** in the Inventory Setup is *Yes.* You will get an overview of all the **Inventory Pick Lines** that are connected to all Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document No.

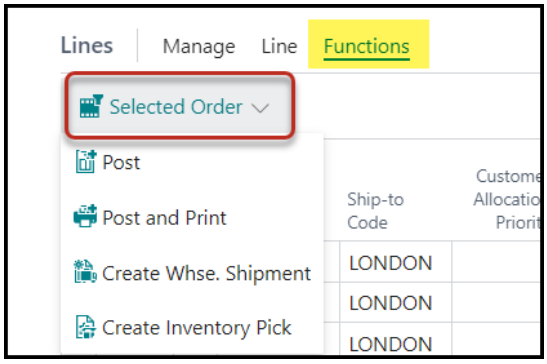
ITEM TRACKING LINES

This function enables you to choose the **Item Tracking Lines** (Lots / Serial Nos.) that you have picked from the Warehouse of the Item from the Line you are standing on.
If you choose existing Lots and/or Serial Nos. the **Quantity Picked (Base)** on the Pick Document Line will be updated accordingly.

However, if you then must create **Inventory Picks** the **Quantity Picked (Base)** will be set to *Zero* again, and you do have to fill the **Qty. to Handle** again in the **Inventory Pick Lines**. While Posting the **Inventory Pick** however, the system will recognize the Item Tracking Lines that you connected to the Pick Document Lines already.

However, if you then must create **Warehouse Shipments** the **Quantity Picked (Base)** will be set to *Zero* again, and you do have to fill the **Qty. to Ship** again in the **Warehouse Shipment Lines**. While Posting the **Warehouse Shipment** however, the system will recognize the Item Tracking Lines that you connected to the Pick Document Lines already, so you do not have to connect them again to the **Warehouse Shipment Line**s.

LINE ACTIONS, FUNCTIONS, SELECTED ORDER



SELECTED ORDER, POST

All Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document No. will be posted.
The options for posting are the same as for Post (F9)

© TRIMIT SOLUTIONS A/S

SELECTED ORDER, POST AND PRINT

The same as Post and Print (Shift+F9), but only for Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document will be posted and printed.

NOTE 1

Posting a Pick Document based on the Posting functionality on the Pick Document (Header) will always post all the lines with **Quantity Picked** <>0.

If you want to post per Sales Order in a Pick Document, you need to post based on the Posting functionality on the Lines.

NOTE 2

Keep in mind that deletion of a Pick Document depends on the field **Delete Pick by Posting** in the Inventory Setup.
If you have Lines with **Quantity Picked** = 0, these Lines cannot be posted, and all the lines of a specific Sales Order will not be deleted from the Pick Document. The lines that were posted will have **Status** = *In Progress.*

CREATE WHSE. SHIPMENT

The same as Create Whse. Shipment, but only for Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document will be taken into the Warehouse Shipment.

CREATE INVENTORY PICK

The same as Create Inventory Pick , but only for Pick Document Lines with the same Sales Order (**Initiating Order No.**) as the Line that you are standing on and within the same Pick Document will be taken into the Inventory Pick.

NOTE

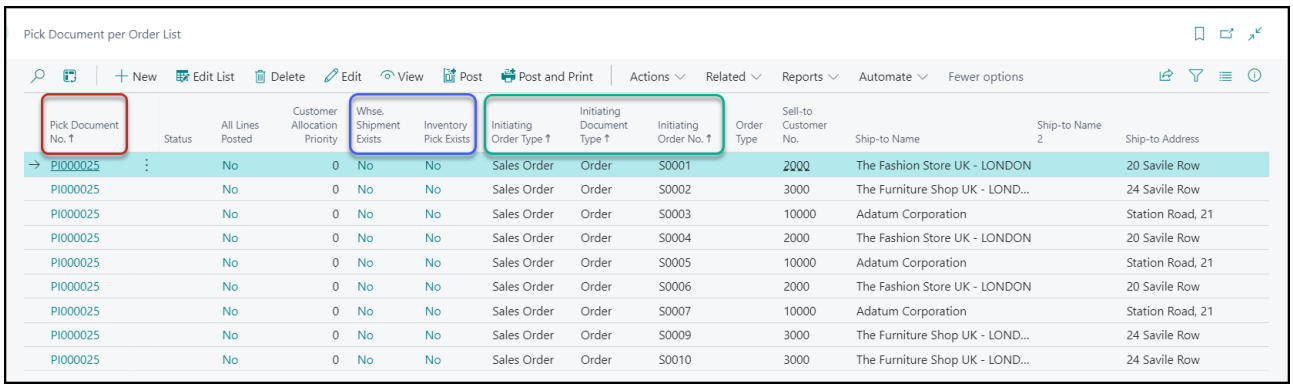
In this White Paper, we will not describe the standard Business Central WMS functionality, like the total handling of the Warehouse Shipments / Picks or Inventory Picks, because this functionality has not been changed besides showing Matrix Lines, or some extra fields regarding a Pick Document No. or a Container No. to express where a Line is coming from.
For more details regarding the Business Central WMS functionality in TRIMIT, see ***White Paper – TRIMIT Warehouse Integration*.**

© TRIMIT SOLUTIONS A/S

PICK DOCUMENT PER ORDER LIST

Via **Search** *pick document per order*, you can open the **Pick Document Per Order** list.

Per Pick Document No. and per Sales Order (**Initiating Order No.** on the Lines), a Line is shown in this page.



Pick Document No.	Status	All Lines Posted	Customer Allocation Priority	Whse. Shipment Exists	Inventory Pick Exists	Initiating Order Type	Initiating Document Type	Initiating Order No.	Order Type	Sell-to Customer No.	Ship-to Name	Ship-to Name 2	Ship-to Address

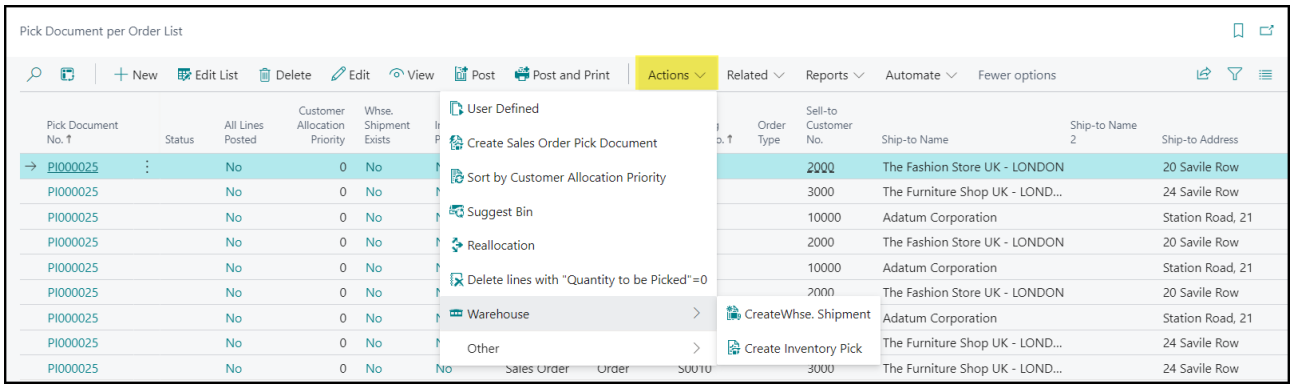
PI000025		No	0	No	No	Sales Order	Order	S0010		3000	The Furniture Shop UK - LOND...		24 Savile Row

NOTE

The fields **Whse. Shipment Exists** and **Whse. Inventory Pick Exists** will only be visible if **Use Warehouse Functionality** in the Inventory Setup is set to *Yes.*

ACTIONS



CREATE SALES ORDER PICK DOCUMENT

This will start the Report, so you can create new Pick Documents.

SORT BY CUSTOMER ALLOCATION PRIORITY

This will sort all the Lines based on the **Shipment Date** (of the Sales Header)**, Customer Allocation Priority**.

SUGGEST BIN

This action is only applicable if **Use Warehouse Functionality** in the Inventory Setup is set to *No,* and you use a simple setup for the Bin Codes.

It can fill the **Bin Code** on the Pick Document Lines of the current **Pick Document No./Sales Order**, based on the Bin Content by Bin Ranking that was created while posting a Receipt of a Purchase Order or Finishing a Production Order.

REALLOCATION

See Reallocation.

© TRIMIT SOLUTIONS A/S

DELETE LINES WITH "QUANTITY TO BE PICKIED"=0

When you have created TRIMIT Pick Documents and have reallocated quantities from one Sales Order to another Sales Order, it can happen, that for some TRIMIT **Pick Document per Order**, you might not have any **Quantity to be Picked** left. Therefore, an extra Action to delete all the Lines of a **Pick Document per Order** if all the Lines of that Order will have **Quantity to be Picked** = *0.*
If this is the case, the complete Pick Document per Order will be deleted.

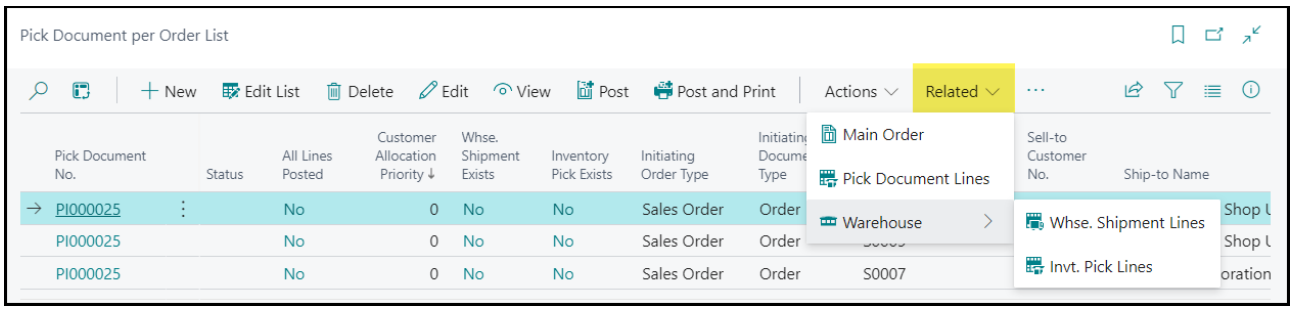
WAREHOUSE, CREATE WHSE. SHIPMENT

If the field **Warehouse Handling Type** is *Whse. Shipment* – which was set while creating the Pick Document Lines based on the fields in the **Location Code***,* this action can create a **Warehouse Shipment** with Pick Document Lines of this Pick Document/Initiating Order No. (Sales Order).
The **Status** of the Pick Document/ Initiating Order No. (Sales Order).will be set to *Planned.*

WAREHOUSE, CREATE INVENTORY PICK

If the field **Warehouse Handling Type** is *Invt. Pick* – which was set while creating the Pick Document Lines based on the fields in the **Location Code***,* this action can create an **Inventory Pick** with Pick Document Lines of this Pick Document/ Initiating Order No. (Sales Order).
The **Status** of the Pick Document/ Initiating Order No. (Sales Order).will be set to *Planned.*

RELATED



MAIN ORDER (CTRL+F7)

This will open the Sales Order page from the **Initiating Order No.**

PICK DOCUMENT LINES

This will open a page with all the Pick Document Lines of this Pick Document/ Initiating Order No. (Sales Order).

WAREHOUSE, WHSE. SHIPMENT LINES

This will open a page with all the Warehouse Shipment Lines of this Pick Document/ Initiating Order No. (Sales Order).

WAREHOUSE, INVT. PICK LINES

This will open a page with all the Inventory Pick Lines of this Pick Document/ Initiating Order No. (Sales Order).

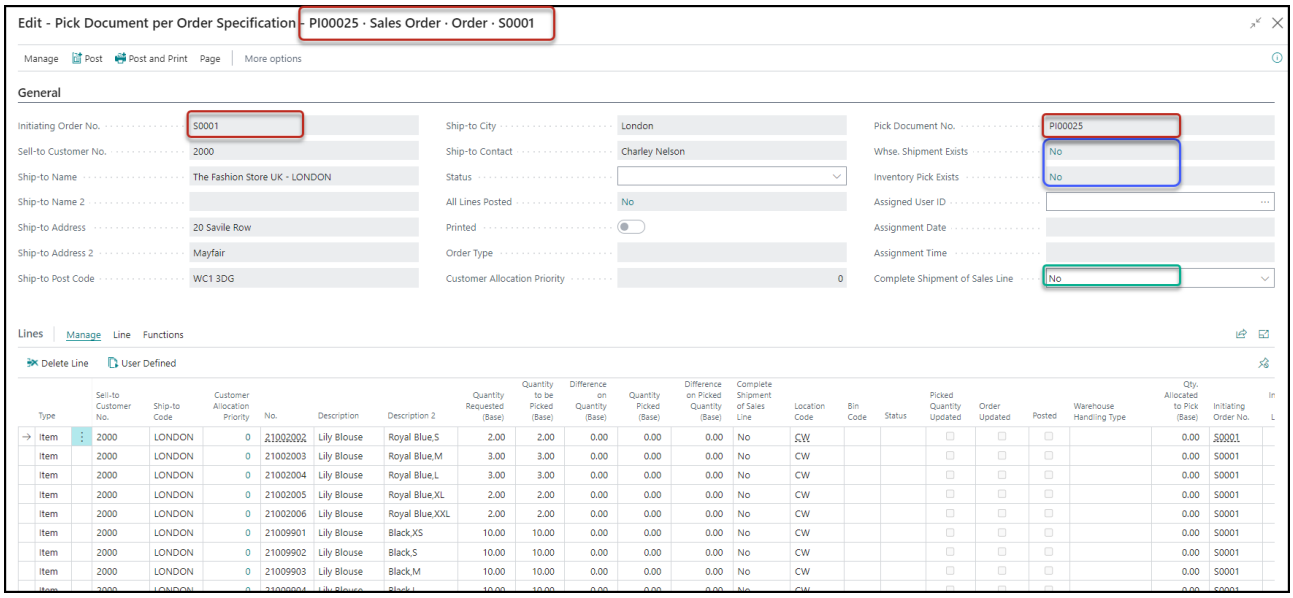
PICK DOCUMENT PER ORDER SPECIFICATION

The **Pick Document per Order Specification** page can be opened via:

1. Clicking ***Edit, View*** or on a Line in the **Pick Document per Order List.** This will show the Pick Document Lines in the **Pick Document per Order Specification** for the **Initiating Order No.** (Sales Order) mentioned on the Line.
2. Clicking on a Line in the **Pick Document per Order**. This will show the Pick Document Lines in the **Pick Document per Order Specification** for the **Initiating Order No.** (Sales Order) mentioned on the Line.



FASTTAB GENERAL

INITIATING ORDER NO.

The number of the **Initiating Order No.** (Sales Order) of the ***Lines*** of the **Pick Document No.**

SELL-TO CUSTOMER

The **Customer** of the **Initiating Order No.** (Sales Order).

SHIP-TO FIELDS

The information of the **Ship-to Code** of the **Initiating Order No.** (Sales Order).

STATUS

This **Status** has the same options as the Status of the **Pick Document Lines**
In this case, it is however only applicable for the specific ***Lines*** related to the **Initiating Order No.** (Sales Order)

ALL LINES POSTED

This field will get a checkmark automatically, if all the Lines of this **Pick Document No.** + **Initiating Order No.** are posted.

© TRIMIT SOLUTIONS A/S

PRINTED

This field will get a checkmark automatically, if the **Pick Document per Order** report (6037020) has been printed for this **Pick Document No.** + **Initiating Order No.**

ORDER TYPE

This field will show the **Order Type** of the **Initiating Order No.**

CUSTOMER ALLOCATION PRIORITY

This field will show the **Customer Allocation Priority** of the **Initiating Order No.**

PICK DOCUMENT NO.

The **Pick Document No.** of the ***Pick Document Lines*** for this specific **Initiating Order No.**

> **NOTE**
> The fields **Whse. Shipment Exists** and **Whse. Inventory Pick Exists** will only be visible if Use Warehouse Functionality in the Inventory Setup is set to *Yes.*
> These fields will be set to *Yes*, if there are Warehouse Shipment Lines or Inventory Pick Lines with a relation to the current Pick Document Lines in this Pick Document No. + Initiating Order No.

ASSIGNED USER ID

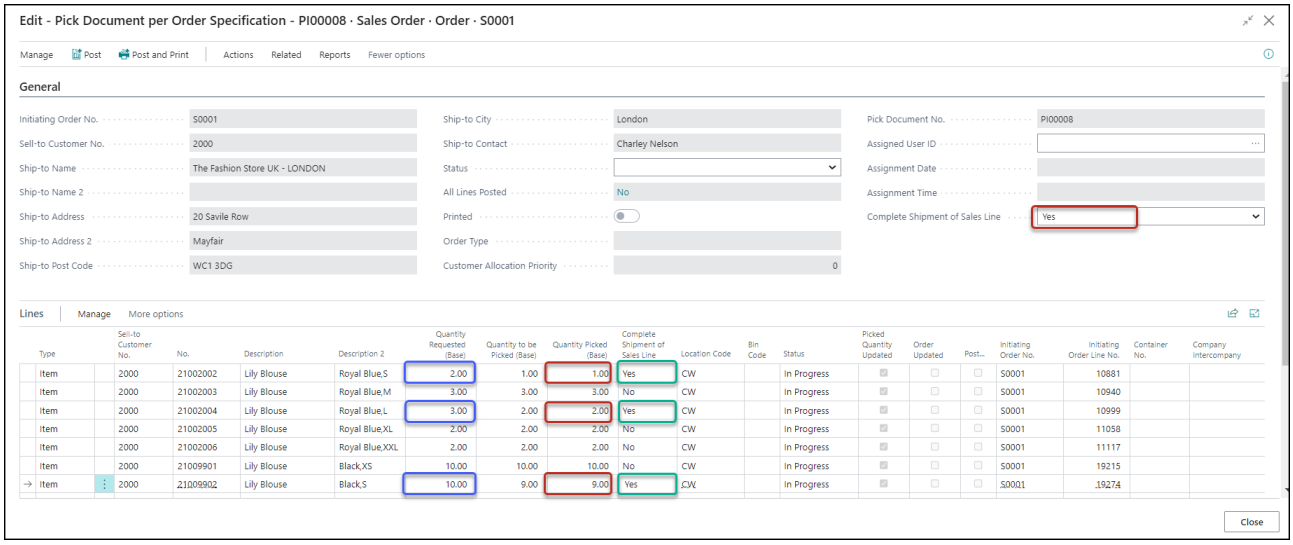
You can enter a User that will manage this specific Pick Document per Order.
This field can only be changed if no Warehouse Shipment Lines or Inventory Pick Lines exist for this Pick Document per Order.

ASSIGNMENT DATE AND ASSIGNMENT TIME

These fields will be set based on setting the **Assigned User ID**.

COMPLETE SHIPMENT OF SALES LINE

You can add the field **Complete Shipment of Sales Line** via ***Personalization***.
When set to *Yes,* it will automatically set the field **Complete Shipment of Sales Line** in the Lines of the Pick Document per Order to *Yes* if the **Quantity Picked (Base)** is less than the **Quantity Requested (Base).**



This means, that if you post the **Pick Document per Order** (or the whole Pick Document), the Pick Document Lines with **Complete Shipment of Sales Line** will have the following result (as it was before if you set the **Complete Shipment of Sales Line** on the Pick Document Lines itself) in the Sales Order:

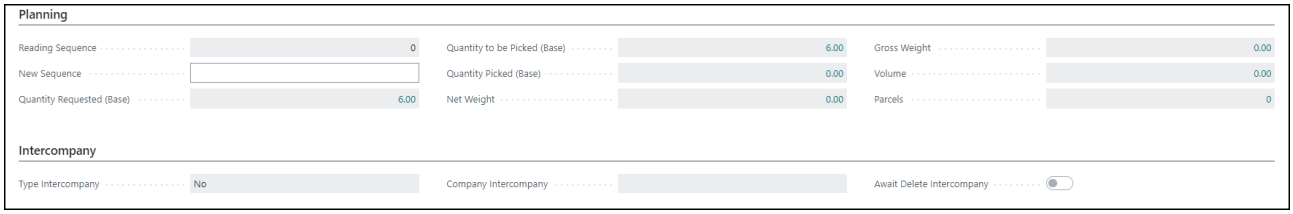
FASTTAB LINES

The fields in the FastTab ***Lines*** are the same as already described in [Description of the Fields of the Pick Document Lines](#).

FASTTAB PLANNING



READING SEQUENCE

This field could be used for customization, based on an Event.
It is used by some furniture customers who want to pack a Truck in a specific order:
The first furniture to take out of the Truck for delivery is the last furniture that has been put into the Truck.

NEW SEQUENCE

Changing the **New Sequence** in the Pick Document per Order will update the **New Sequence** in the attached Pick Document Lines.

QTY. REQUESTED (BASE)

Total of the **Qty. Requested (Base)** of the Lines in this Pick Document per Order.

QTY. TO BE PICKED (BASE)

Total of the **Qty. to be Picked (Base)** of the Lines in this Pick Document per Order.

QTY. PICKED (BASE)

Total of the **Qty. Picked (Base)** of the Lines in this Pick Document per Order.

NET WEIGHT

Total of the **Net Weight** of the Lines in this Pick Document per Order, which was based on the **Net Weight** of the Sale Line, or the Item multiplied with the **Qty. to be Picked (Base)**.

© TRIMIT SOLUTIONS A/S

GROSS WEIGHT

Total of the **Gross Weight** of the Lines in this Pick Document per Order, which was based on the **Gross Weight** of the Sale Line, or the Item multiplied with the **Qty. to be Picked (Base)**.

VOLUME

Total of the **Volume** of the Lines in this Pick Document per Order, which was based on the **Volume** of the Sale Line, or the Item multiplied with the **Qty. to be Picked (Base)**.

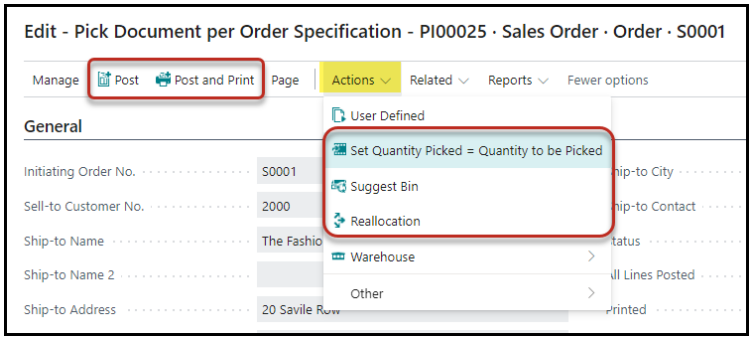
PARCELS

Total of the number of **Parcels** of the Lines in this Pick Document per Order, which was based on the **Qty. to be Picked (Base)** divided by the **Quantity per Parcel** of the Sales Line or the Item.

FASTTAB INTERCOMPANY

The fields in the FastTab ***Intercompany*** are the same as already described in FastTab Intercompany.

ACTIONS

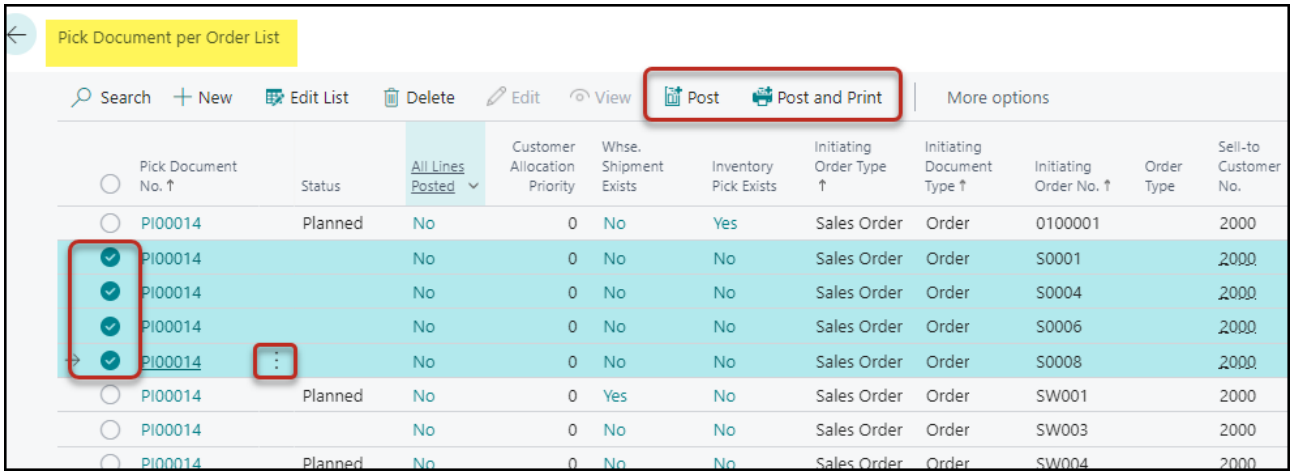


You have the same Functions available as in Actions of Pick Document
Besides the **Reallocation**, which is still based on the totals for the whole Pick Document, the other Functions only apply for the Lines within this specific **Initiating Order No.** (Sales Order) of this specific **Pick Document No.**

The only difference is when clicking ***Post*** or ***Post and Print***.
After posting the Lines of this specific **Initiating Order No.** (Sales Order) of this specific **Pick Document No.**, the parameter Delete Pick by Posting in the Inventory Setup determines if posted Lines will be deleted yes or no.

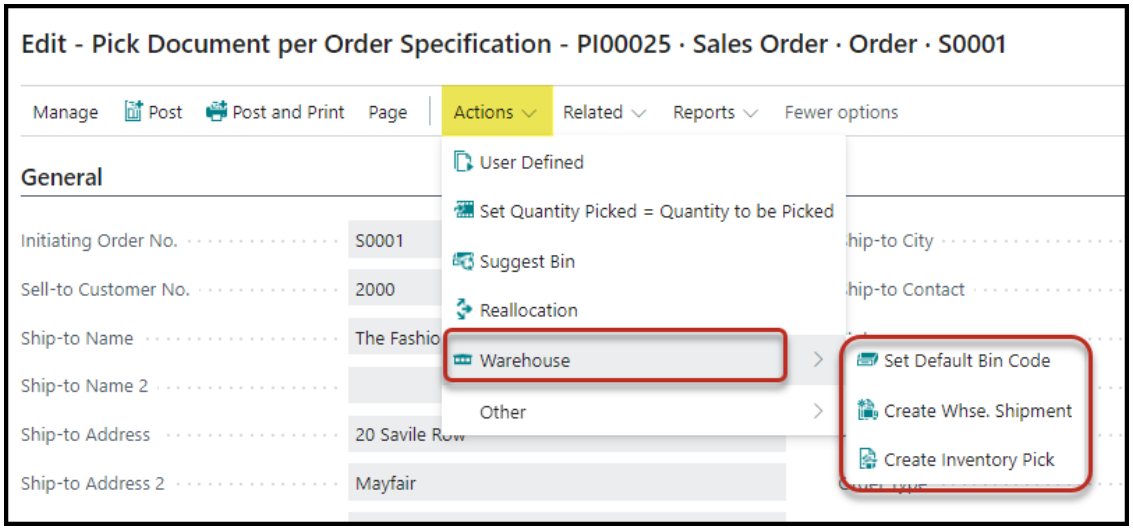
In the **Pick Document per Order List** (to be found via ***Search*** in Role Center), you are also able to post several Pick Document/Initiating Order No. (Sales Order) Lines at the same time by clicking **Show more options** and enter checkmarks in the **Select row**.
After you have selected several rows, you can click ***Post*** or ***Post and Print.***

© TRIMIT SOLUTIONS A/S



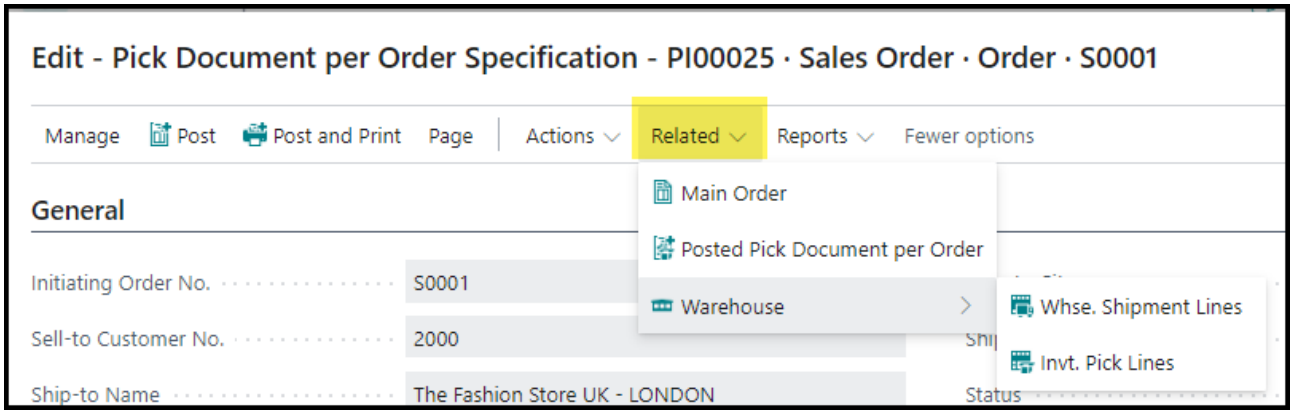
To be able to use this functionality the parameter [Suppress Dialogs at Pick Update & Posting]() in the Inventory Setup needs to have a checkmark.

ACTIONS, WAREHOUSE



You have the same Functions available as in [Actions, Warehouse of Pick Document]()
All Functions only apply for the Lines within this specific **Initiating Order No.** (Sales Order) of this specific **Pick Document No.**

RELATED



© TRIMIT SOLUTIONS A/S

MAIN ORDER (CTRL+F7)

This will open the Sales Order page from the **Initiating Order No.**

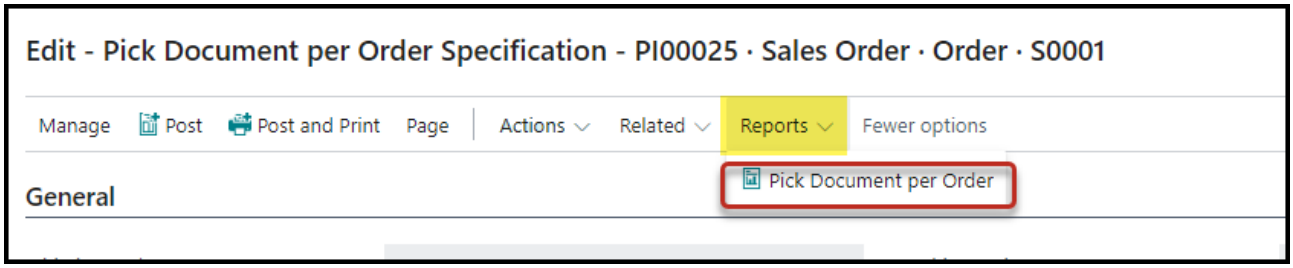
POSTED PICK DOCUMENT PER ORDER

This will show you the ***Posted Pick Document per Order*** for the current **Initiating Order No.**

RELATED, WAREHOUSE

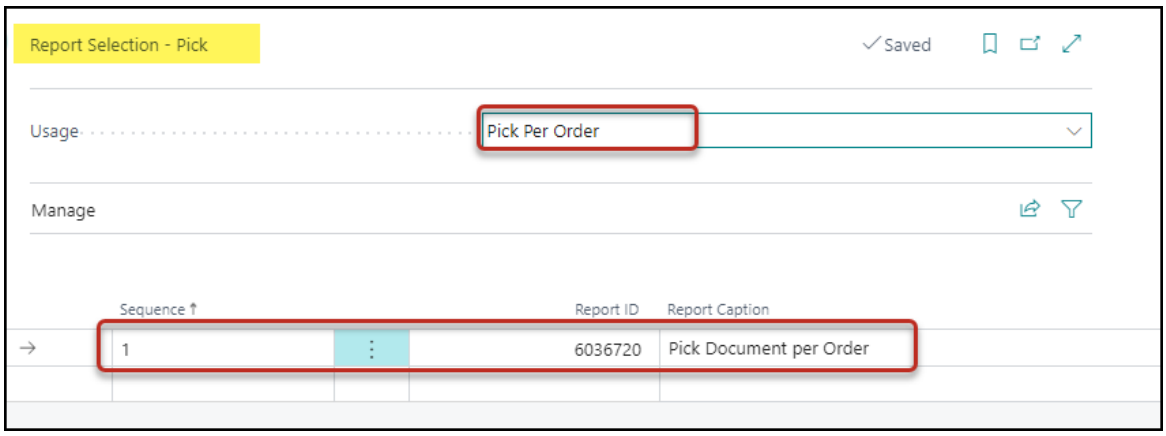
This will only be shown if Parameter **Use Warehouse Functionality** in the Inventory Setup is *Yes.*
You have the same Functions available as in Related, Warehouse of Pick Document.
All Functions only apply for the Lines within this specific **Initiating Order No.** of this specific **Pick Document**.

REPORTS



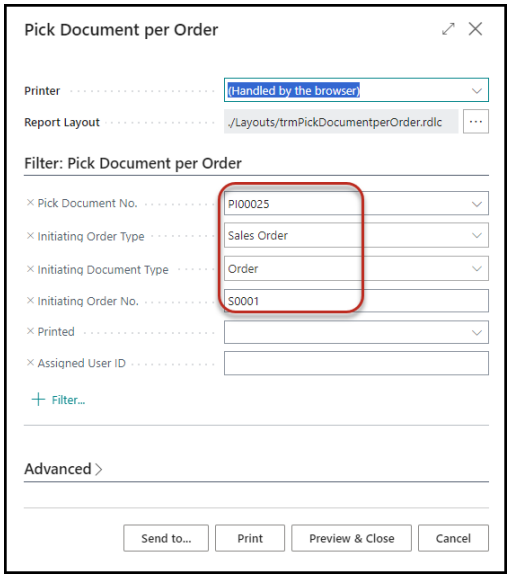
PICK DOCUMENT PER ORDER

TRIMIT created an example for the report ***Pick Document per Order (6036720)*** which also needs to be set in the **Report Selection - Pick,** which can be found via **Search** *Report Selection – Pick.*



The report ***Pick Document per Order (6037020)*** will look as follows:

© TRIMIT SOLUTIONS A/S



Per **Initiating Order No.** on the Pick Document Lines, a new Page will be printed:

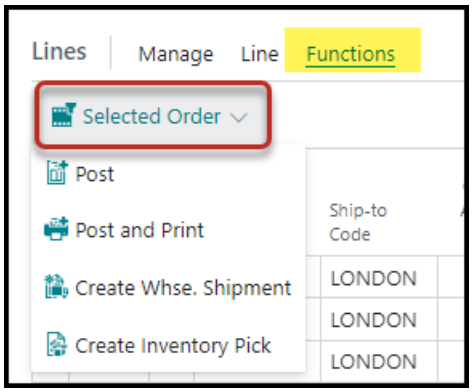
LINE ACTIONS, LINE

The same functions as described in Line Actions, Line of the Pick Document.

LINE ACTIONS, FUNCTIONS, SELECTED ORDER



The same functions as described in Line Actions, Functions, Selected Order of the Pick Document.

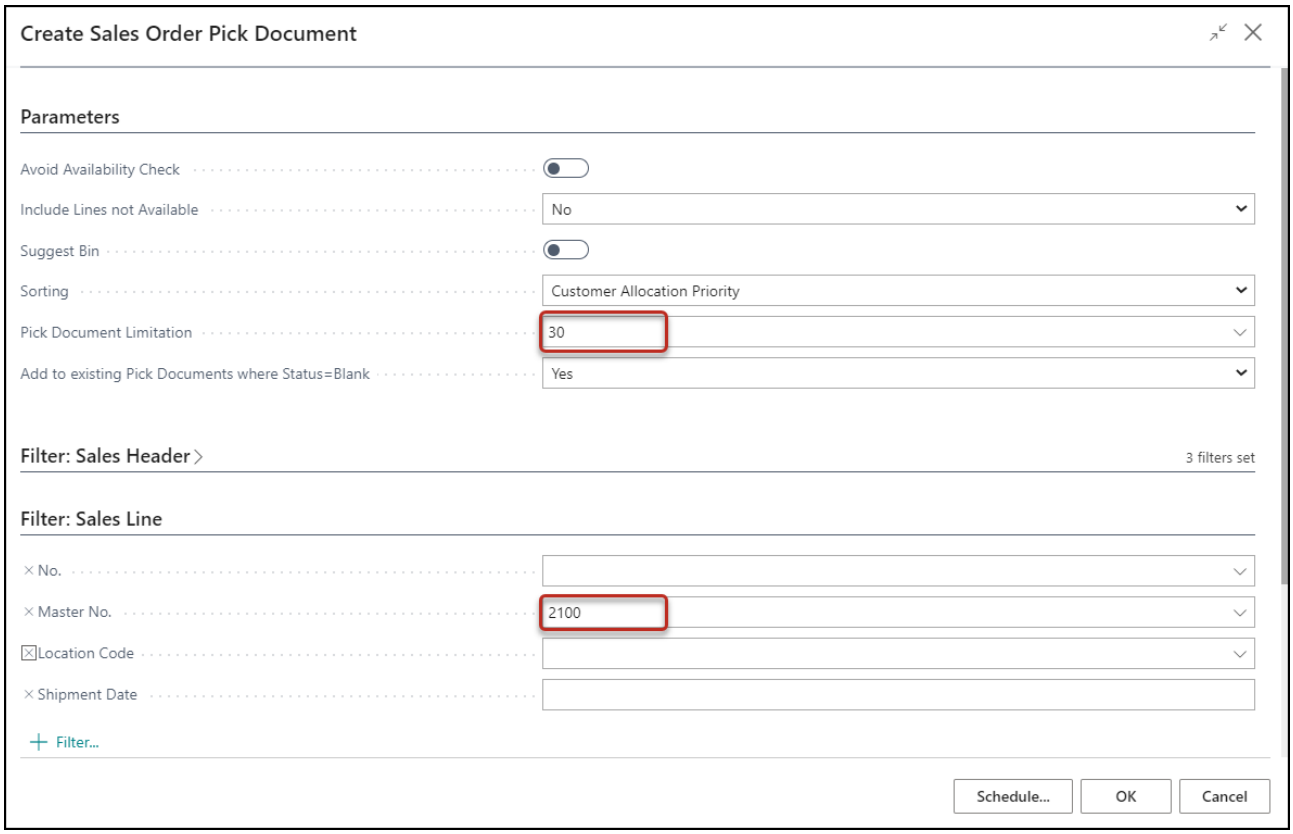
© TRIMIT SOLUTIONS A/S

REALLOCATION

The **Pick Document Reallocation** enables the user to change the pre-assigned **Quantity to be Picked** in the Pick Document Lines within a specific Pick Document.

This means that Reallocation is only meaningful if you would create Pick Documents where you have several Customers buying the same Master. I.e., when you create a Pick Document for a specific Master, but Reallocation is possible on any created Pick Document.
In that case, you can get an overview of all the Sales Lines for specific Masters/Colors within the Reallocation procedure.

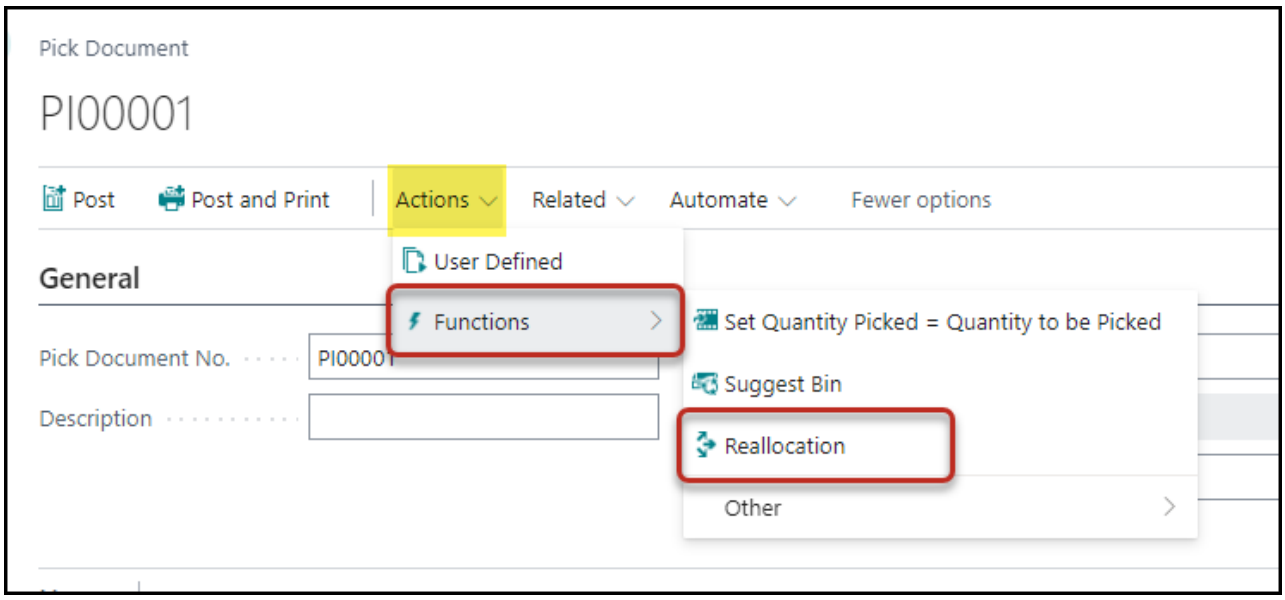
To see the pictures below regarding the Reallocation you need to create a Pick Document in a clean Demo Site with the following settings:



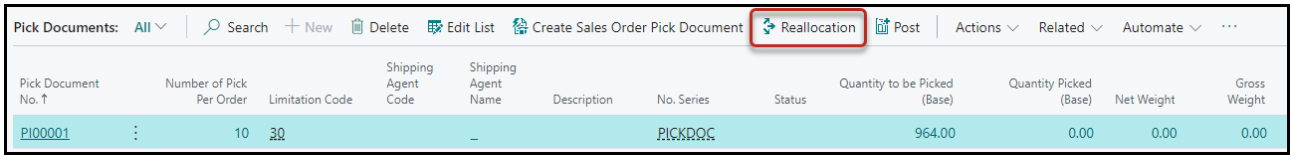
NOTE
If you want to use the Reallocation function, the **Quantity Picked** must be Zero. Otherwise, you cannot change the **Quantity to Pick** in the Reallocation Matrix.
You even need to change the field **Set Quantity Picked** in the Inventory Setup/FastTab Inventory, to make sure that the **Quantity Picked** is Zero

© TRIMIT SOLUTIONS A/S

Standing in the Card of the new created **Pick Document No.,** click ***Actions, Functions, Reallocation***.

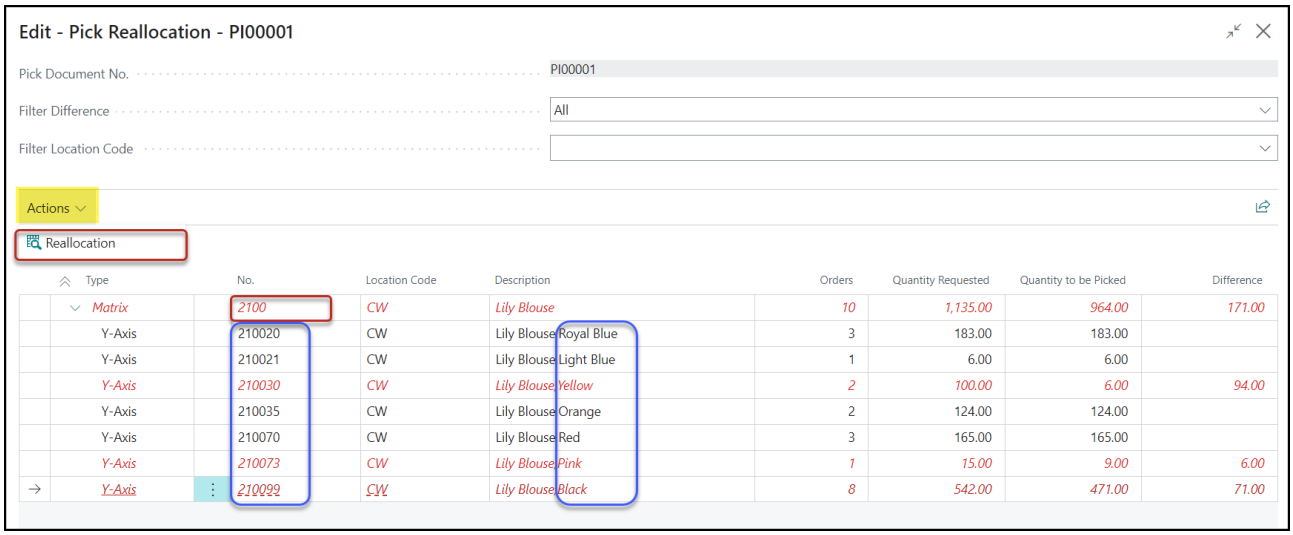


Or while standing in the **Pick Documents** list, click ***Reallocation.***



You get an overview on various levels regarding the Pick Document Lines within the Pick Document No.:

1) If **Type** is *Matrix,* the **No.** is a Master, and the **Orders** are the number of Sales Orders (**Initiating Order Nos.**) for this specific Master within the current Pick Document. The quantities shown are the total quantities for this Master.
2) If **Type** is *Y-Axis,* the **No.** represents the Master and all the VarDim Variants besides the last VarDim Type. I.e., If you have a Master with Colors and Sizes, the **No.** represents the Master+Color. If you have a Master with Colors, Lengths, Fabric and Sizes, the **No.** represents the Master+Color+Length+Fabric. The number of Orders and the quantities are also calculated for that level.



The red lines indicate that there is less **Quantity to be Picked** as there is **Quantity Requested.**

© TRIMIT SOLUTIONS A/S

It could also look as follows if several Masters/Items are on the same Pick Document:

Type	No.	Location Code	Description	Orders	Quantity Requested	Quantity to be Picked	Difference
Matrix	2020	BLUE	Isla Trousers	1	39.00	30.00	9.00
Y-Axis	202060	BLUE	Isla Trousers,Forest Green	1	26.00	17.00	9.00
Y-Axis	202090	BLUE	Isla Trousers,Grey	1	13.00	13.00	
Matrix	2410	BLUE	Katie Scarf	1	10.00	10.00	
Y-Axis	241065	BLUE	Katie Scarf,Lawn Green	1	5.00	5.00	
Y-Axis	241099	BLUE	Katie Scarf,Black	1	5.00	5.00	

You can filter on **Filter Difference** is *All or Only difference larger than 0* and/or on the ***Filter Location Code*.**

Edit - Pick Reallocation - PI00001

Pick Document No. PI00001

Filter Difference Only difference larger than 0

Filter Location Code All / Only difference larger than 0

Actions

Reallocation

Type	No.	Location Code	Description	Orders	Quantity Requested	Quantity to be Picked	Difference
Matrix	2100	CW	Lily Blouse	10	1,135.00	964.00	171.00
Y-Axis	210030	CW	Lily Blouse,Yellow	2	100.00	6.00	94.00
Y-Axis	210073	CW	Lily Blouse,Pink	1	15.00	9.00	6.00
Y-Axis	210099	CW	Lily Blouse,Black	8	542.00	471.00	71.00

Standing on a **Matrix** Line or on a **Y-Axis** Line determines also what you will see when you click ***Actions, Reallocation Matrix (Ctrl+M)***

Below you see the Page if you would have pressed **Ctrl+M** on the **Matrix** Line:
Per Master the Lines in the Matrix are sorted per Y-Axis (in this Page the Color of the *2100 Lily Blouse*).

Edit - - Reallocate Pick Document PI00001 - No. 2100 - Lily Blouse

2100	Black	S0009	3000	2 [2]	100	0	[0]	1 [1]	[0]	[0]	[0]	[0]	1 [1]
2100	Black	S0010	3000	4 [4]	100	0	1 [1]	2 [2]	[0]	[0]	[0]	[0]	1 [1]

If you had pressed **CTRL+M** on a **Y-Axis** line, you only would have seen the lines within one **Y-Axis** (in this case, only one Color, i.e., *Black*).
The quantities in the brackets besides the Sizes - i.e., XS **[0]** - represent the available Inventory of the Sizes for the Line (Color) that the cursor is on. In the previous Picture, it is for the color *Royal Blue*.
Changing the quantities in the cells, will directly have its influence on the quantities between brackets besides the Sizes. Therefore, you will have a clear overview of the quantity that still can be assigned to another Pick Document Line. You might however need to press **F5** Refresh.

CUSTOMER ALLOCATION PRIORITY

Let us see the differences in assigned quantities when we have different Customer Allocation Priorities.
If all the Sales Orders of the last Chapter have the same **Customer Allocation Priority** = *0* the assigned quantities for the color *Black* will look as follows:

Matrix Inventory Profile | Related | Fewer options

No.	Variant Description	Initiating Order No.	Sell-to Customer No.	Pick Total	Pick %	Customer Allocation Priority	XS [38]	S [19]	M [0]	L [0]	XL [0]	XXL [0]	3XL [33]
2100	Black	S0001	2000	70 [70]	100	0	10 [10]	10 [10]	10 [10]	10 [10]	10 [10]	10 [10]	10 [10]
2100	Black	S0002	3000	40 [40]	100	0	[0]	5 [5]	5 [5]	10 [10]	10 [10]	5 [5]	5 [5]
2100	Black	S0003	10000	130 [130]	100	0	[0]	10 [10]	20 [20]	30 [30]	40 [40]	30 [30]	[0]
2100	Black	S0004	2000	6 [6]	100	0	[0]	1 [1]	2 [2]	2 [2]	1 [1]	[0]	[0]
2100	Black	S0005	10000	15 [15]	100	0	1 [1]	2 [2]	3 [3]	3 [3]	3 [3]	2 [2]	1 [1]
2100	*Black*	*S0007*	*10000*	*204 [275]*	*74*	*0*	[0]	50 [50]	*62 [75]*	*48 [75]*	*39 [50]*	*5 [25]*	[0]
2100	Black	S0009	3000	2 [2]	100	0	[0]	1 [1]	[0]	[0]	[0]	[0]	1 [1]
2100	Black	S0010	3000	4 [4]	100	0	1 [1]	2 [2]	[0]	[0]	[0]	[0]	1 [1]

Now we change the **Customer Allocation Priority** of the Sales Order *S0007* of Customer *10000* to *1* and all the other Sales Orders to *5*)
Delete the existing Pick Document.
Create new Pick Document with **Sorting** *Customer Allocation Priority,* **Pick Document Limitation** *30,* and a Filter on **Master No.** *2100* again.

Matrix Inventory Profile | Related | Fewer options

No.	Variant Description	Initiating Order No.	Sell-to Customer No.	Pick Total	Pick %	Customer Allocation Priority	XS [38]	S [19]	M [0]	L [0]	XL [0]	XXL [0]	3XL [33]
2100	Black	S0001	2000	70 [70]	100	5	10 [10]	10 [10]	10 [10]	10 [10]	10 [10]	10 [10]	10 [10]
2100	Black	S0002	3000	40 [40]	100	5	[0]	5 [5]	5 [5]	10 [10]	10 [10]	5 [5]	5 [5]
2100	*Black*	*S0003*	*10000*	*75 [130]*	*58*	*5*	[0]	10 [10]	*12 [20]*	*8 [30]*	*33 [40]*	*12 [30]*	[0]
2100	Black	S0004	2000	1 [1]	100	5	[0]	1 [1]	[0]	[0]	[0]	[0]	[0]
2100	Black	S0005	10000	4 [4]	100	5	1 [1]	2 [2]	[0]	[0]	[0]	[0]	1 [1]
2100	Black	S0007	10000	275 [275]	100	1	[0]	50 [50]	75 [75]	75 [75]	50 [50]	25 [25]	[0]
2100	Black	S0009	3000	2 [2]	100	5	[0]	1 [1]	[0]	[0]	[0]	[0]	1 [1]
2100	Black	S0010	3000	4 [4]	100	5	1 [1]	2 [2]	[0]	[0]	[0]	[0]	1 [1]

You can see that the quantities assigned on the different Sales Orders now differ:
Sales Order *S0007* can now be picked for *100 %*, but Sales Order *S0003* changes from *100 %* to *58 %*.

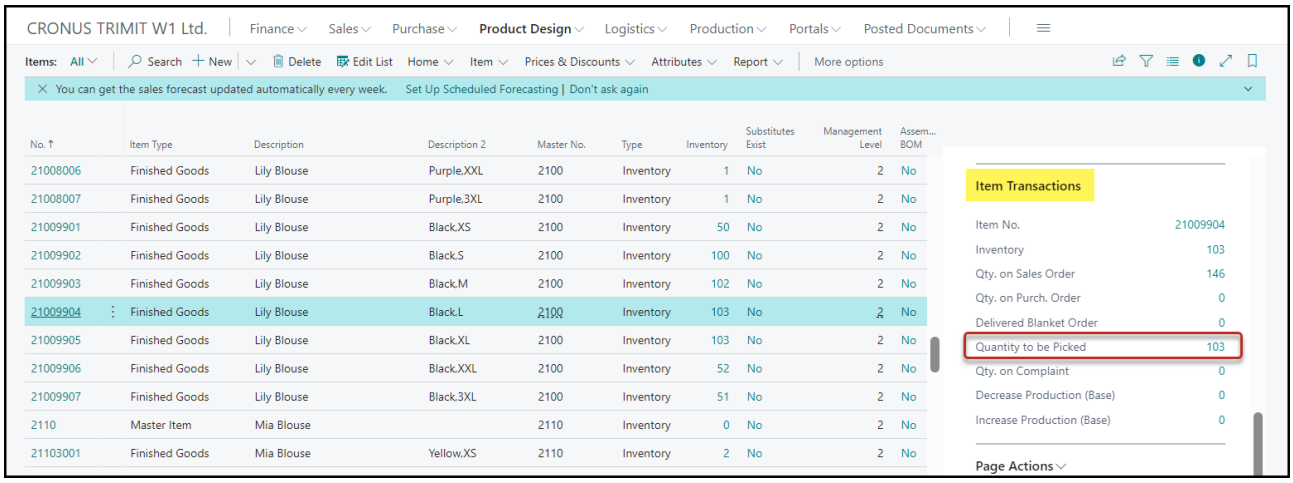
© TRIMIT SOLUTIONS A/S

INFORMATION

ON ITEM LIST

In the **Item List** you can add a FactBox ***Item Transactions***, and in this FactBox you are able to add the field **Quantity to be Picked** via ***Personalize***.

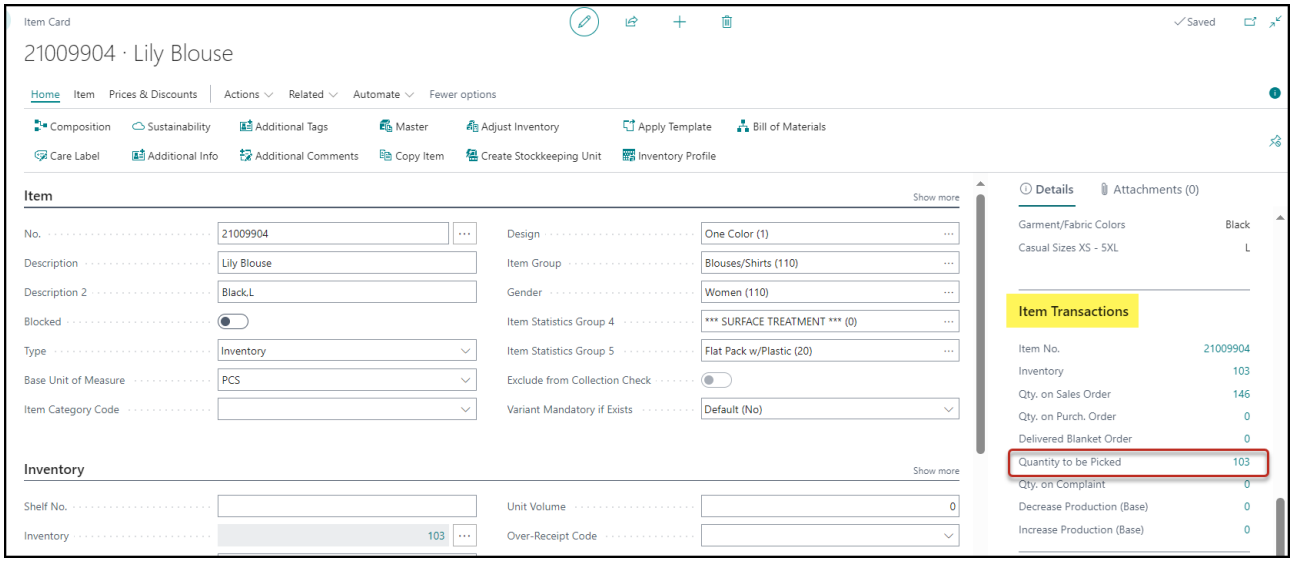
This will give you the quantities on TRIMIT Pick Documents that should be picked.



ON ITEM CARD

In the **Item Card** the FactBox ***Item Transactions*** will be shown automatically, but the field **Quantity to be Picked** is not shown by default and needs to be added via ***Personalize***.

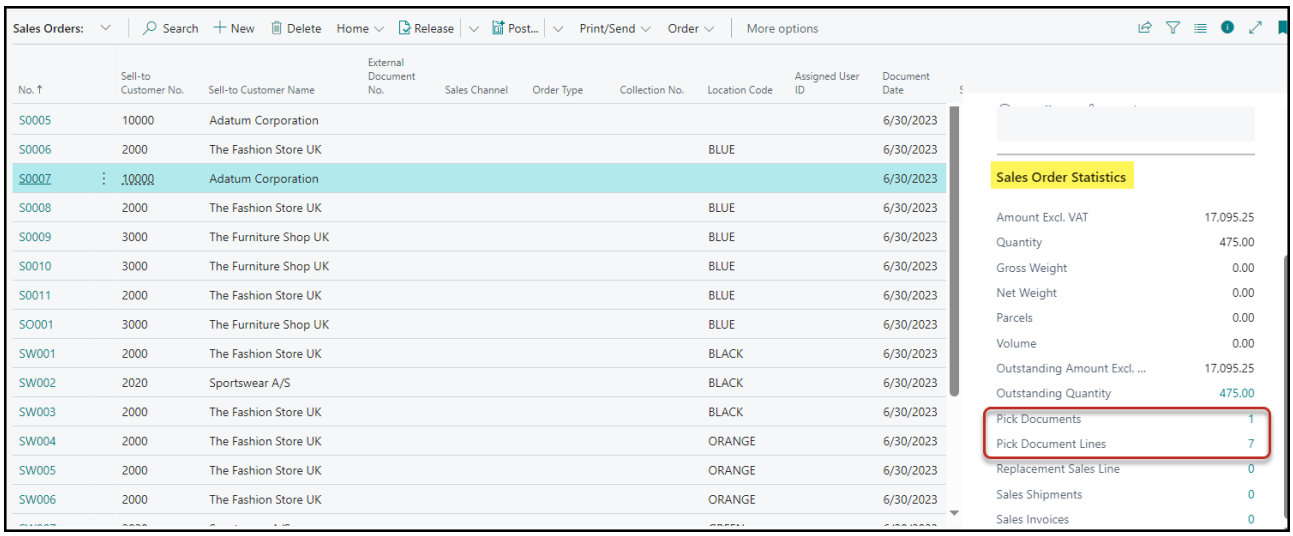
This will give you the quantities on TRIMIT Pick Documents that should be picked.

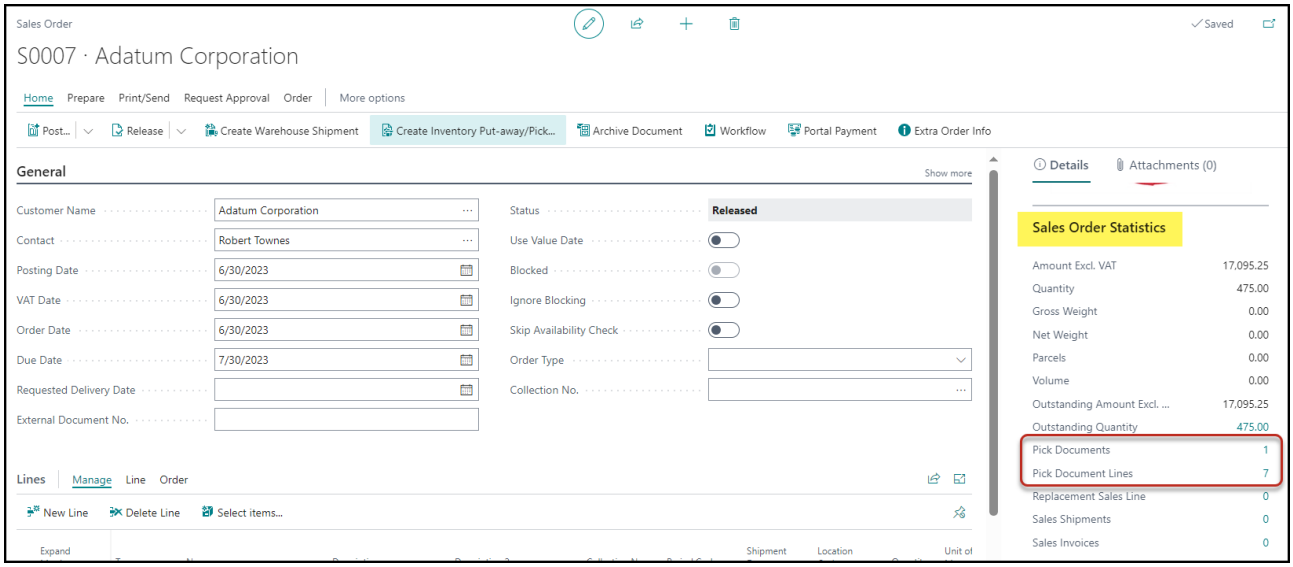


© TRIMIT SOLUTIONS A/S

ON SALES ORDER LIST/PAGE

In the Sales Order List/Page, you can add the FactBox ***Order Statistics,*** which can show you the TRIMIT Pick Documents and Lines that are related to this specific Sales Order.





© TRIMIT SOLUTIONS A/S

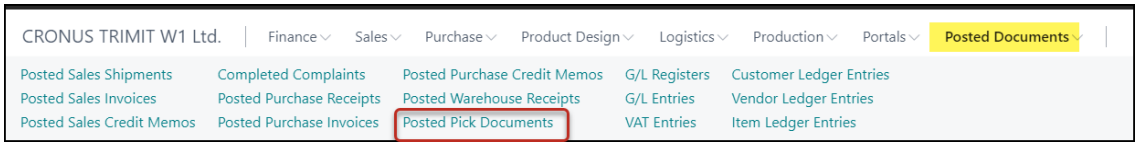
HISTORY/ARCHIVE

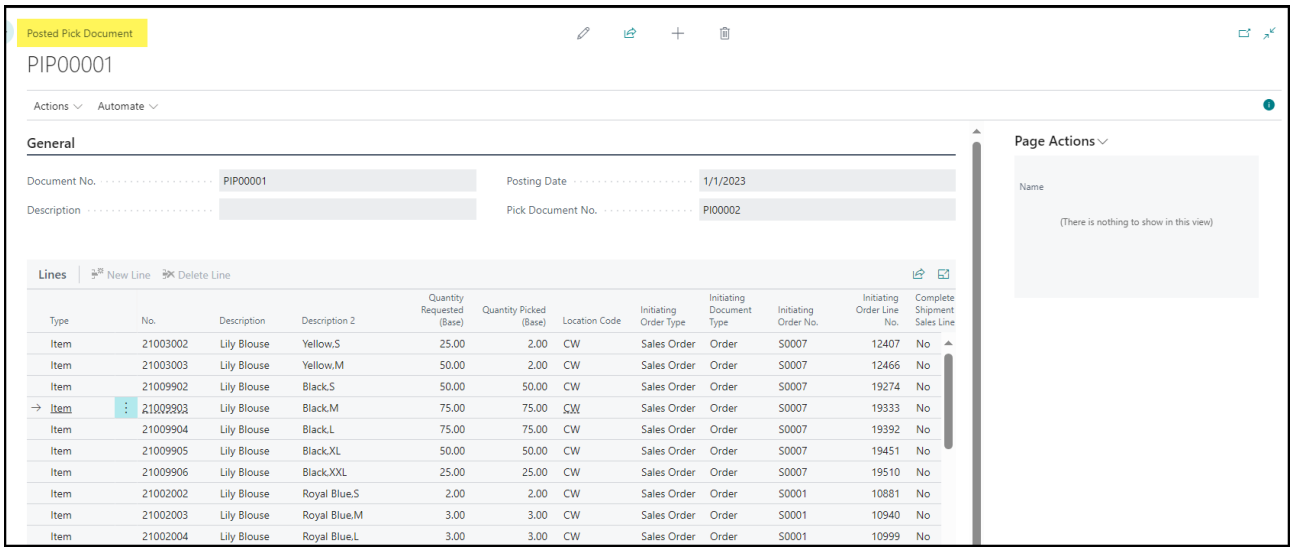
After Pick Documents have been posted, not only Posted Shipments (and Posted Invoices) can be created, but also Posted Pick Documents.

POSTED PICK DOCUMENTS

Via **Search** *Posted Pick Document List,* you can see per **Posted Pick Document** the Lines that were picked and posted.

There is also a direct link in the Role Center (Profile) *TRM_SB TRIMIT Small Business:*



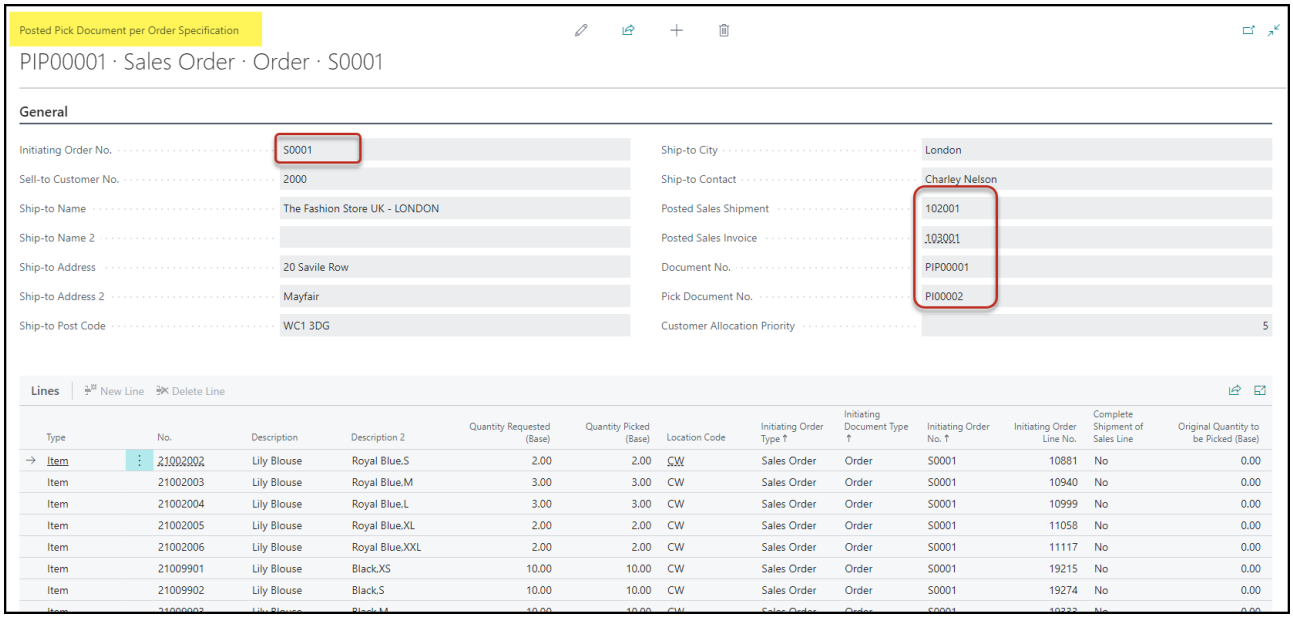


POSTED PICK DOCUMENT PER ORDER LIST

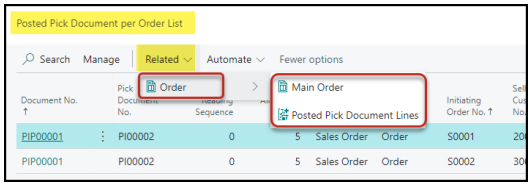
Via **Search** *Posted Pick Document per Order List***,** you can see the list of all the **Posted Pick Documents** with lines per Sales Orders that were picked and posted.

© TRIMIT SOLUTIONS A/S

By clicking on the **Document No.,** it will open the Card of the ***Posted Pick Document per Order Specification:***



RELATED, ORDER IN POSTED PICK DOCUMENT PER ORDER LIST



Via ***Main Order (Ctrl+F7),*** you can see the original Sales Order.

NOTE

This is only possible if the Sales Order is still available. If the Sales Order is completely shipped and invoiced, it will not be in the Table for Sales Orders anymore and therefore not visible anymore.

Via ***Posted Pick Document Lines (Ctrl+F11),*** you can see the different Posted Pick Document Lines within the same Sales Order.
