SETUP

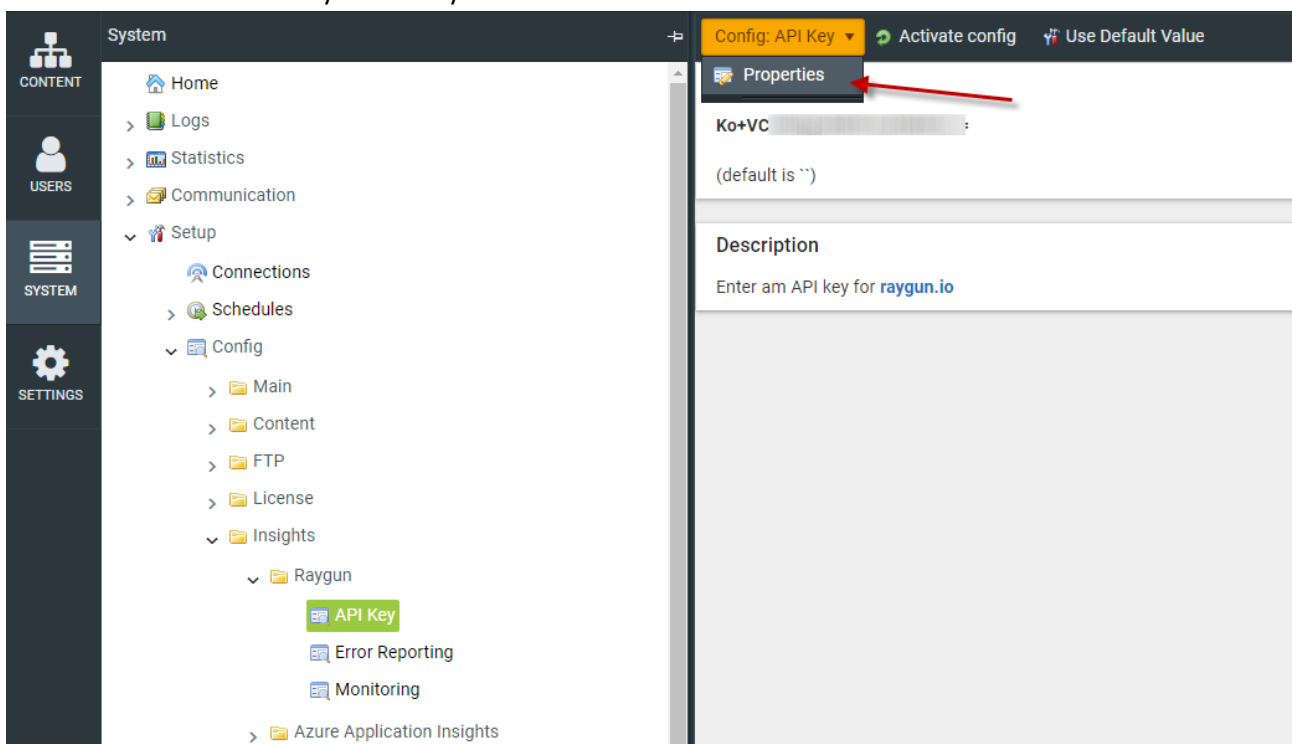

TRIMIT recommends using an error monitor and crash reporting application called Raygun.

The setup steps are described in the following article:

<https://raygun.com/blog/welcome-to-raygun/>

Modelyn can be connected to Raygun. In this way Raygun can, for example, collect the eventual Modelyn exceptions and send a report to an admin user. In order to connect these two applications, it is required to obtain an API key from Raygun and insert it inside the Modelyn admin.

The location for the API key in Modelyn admin:

When the API key is set then click **Save** and then click **Activate config**.
