Introduction

Especially for the Purchase/Production of Fashion products in South-East Asia most of the transport is carried out in Containers on a ship.

If the Estimated Time of Arrival (ETA) of a ship is changing, all the Purchase Lines in the Container will be earlier/later as well. This means, that you need to change the Expected Receipt Dates for all these Purchase Lines.

Being able to change 1 Date on the Container and with that being able to change the **Expected Receipt Dates** of all the attached Purchase Lines at once, makes it much easier to handle.

This is the primary functionality of the **TRIMIT Container Management**.

Besides the use of Containers for Purchase Lines, it is however also possible to use Containers for Sales Lines and Transfer Lines. In that perspective you can talk about boxes/parcels that are shipped to the Customer or transferred from one Location Code to another Location Code.

The audience for this document is the Consultant or very skilled User. It will only describe the TRIMIT fields/functionality and not the standard Business Central fields/functionality. Be aware of not changing settings and parameters in a live database without consulting the implementing partner.

The functionality described is the functionality as of **TRIMIT 26.1 for Business Central W1 BC28.X**.

The pictures in this White Paper are based on the demo data for **TRIMIT 26.1**, which is based on Microsoft Dynamics 365 Business Central 2026 Release Wave 1, in the demo company **CRONUS TRIMIT W1 Ltd.** (based on CRONUS International Ltd. of Microsoft Dynamics 365 Business Central).

Components

TRIMIT Container Management contains the following objects:

The tables

- 6036329 trm Temp Container Cont Select*
- 6036330 trm Temp Container Content*
- 6037402 trm Container*

The pages

- 6037401 trm Container Card*
- 6037402 trm Container List*
- 6037403 trm Container Sales Line List*
- 6037404 trm Container Purch Line List*
- 6037405 trm Container Trf Line List*
- 6037406 trm Temp Container Content Sel*
- 6037407 trm Temp Ctr Split Purch Lines*
- 6037409 trm Temp Container Content*

The reports

- 6037401 trm Container Content*

The codeunits

- 6037401 trm Container Management*

Besides these special objects there are also changes in several existing objects because of special Fields that have been added. Beneath is a list of the Fields in existing Tables:

Table 6036470	trm API Sales Line
- Field 6037072	Container No.
Table 6036780	trm Pick Document Header
- Field 130	Container No.
Table 6036781	trm Pick Document Line
- Field 130	Container No.
Table 6037028	trm Sales Import Journal Line
- Field 6037072	Container No.
Table 6038130	trm Portal Basket Line Temp
- Field 6037072	Container No.
Table 6038142	trm B2C Basket Line Temp
- Field 6037072	Container No.
Table 6038151	trm Portal Purchase Line
- Field 6037070	Container No.
TableExtension 6036515	trm Sales Line Ext extends Sales Line (Table 37)
- Field 6037072	trm Container No.
TableExtension 6036517	trm Purchase Line Ext extends Purchase Line (Table 39)
- Field 6037070:	trm Container No.
- Field 6037071:	trm Split Quantity
TableExtension 6036528	trm Sales Shipt Line Ext extends Sales Shipment Line (Table 111)
- Field 6037072	trm Container No.
TableExtension 6036530	trm Sales Invoice Line Ext extends Sales Invoice Line (Table 113)
- Field 6037072	trm Container No.
TableExtension 6036534	trm Purch. Rcpt. Line Ext extends Purch. Rcpt. Line (Table 121)
- Field 6037070:	trm Container No.
TableExtension 6036547	trm Inventory Setup Ext extends Inventory Setup (Table 313)
- Field 6036990:	trm Sales/Container Management
- Field 6037211:	trm Container Nos.
TableExtension 6036553	trm Sales Line Archive ext extends Sales Line Archive (Table 5108)
- Field 6037072	trm Container No.
TableExtension 6036561	trm Transfer Line Ext extends Transfer Line (Table 5741)
- Field 6037070:	trm Container No.
TableExtension 6036563	trm Transfer Shipt Line Ext extends Transfer Shipment Line (Table 5745)
- Field 6037070:	trm Container No.
TableExtension 6036564	trm Transfer Receipt Hdr Ext extends Transfer Receipt Header (Table 5747)
- Field 6037070:	trm Container No.

And many more.

Setups

To start using the **TRIMIT Container Management** functionality you need to set up the Container Numbers and the way you want to use the Containers in relation to Sales Order Lines.

Inventory Setup

You first need the Number Series for the Container Nos.:

Via **Search Inventory Setup** on the FastTab **Numbering**.

Inventory Setup

Sales/Container Management

Via Container Management

With this parameter you can determine how you want to use the Container Management features for Sales Lines. It has no influence on Purchase Lines or Transfers Lines.

You can choose between the following two options:

Via Container Management	You create a Container No. and then you select the Sales Lines and Quantities of the Sales Lines that are in that specific Container No.
Via Pick	You create a Container No. and then connect the Container No. to Pick Documents. This means that all the picked quantities of the Pick Documents will be in the same Container.

Note

The default for this field is *Via Container Management*.

With **Pick Documents**, we mean the TRIMIT Pick Documents, not the Warehouse Pick or Inventory Pick of Business Central.

If the parameter **Use Warehouse Functionality** is set to *TRUE*, and you want to make use of Warehouse Shipments or -Receipts, you also need to determine for which level you want to create these Warehouse Documents based on the Container No.

Warehouse

Use Warehouse Functionality

Require Pick Production

Warehouse Shipment/Receipt creation per Conta...

Per Order/Location

Warehouse Shipment/Receipt creation per Container

Show Help

You can choose between the following two options:

Per Order/Location	Per Order/Location a separate Warehouse Shipment or -Receipt will be created
Per Container/Location	Per Container/Location a separate Warehouse Shipment or Receipt will be created.

Creating Containers Manually

You always need to create Container Nos. manually if you use the TRIMIT Container Management for Purchase Lines or for Transfer Lines.

You also need to create Container Nos. for Sales Lines manually if the parameter **Sales/Container Management** in the Inventory Setup is *Via Container Management*.

If this parameter is *Via Pick*, you need to create the Container No. manually, but by assigning a Container No. to a Pick Document, the Sales Lines of the Pick Document will be attached to the Container No. automatically.

Containers

You can create and maintain the Container Nos. via **Search Containers** or via the Role Center **TRIMIT Small Business/Logistics** or via the Role Center **TRIMIT Production/Logistics**.

Container List											
Container List											
No. ↑	Type	Lines Attached	Whse. Receipt Lines Exists	Whse. Shipment Lines Exists	Whse. Inventory Pick Exists	Whse. Inventory Put-away Exists	Comment	Container ID	Include Containers	Attached to Container No.	Status

The fields **Whse. Receipt Lines Exists**, **Whse. Shipment Lines Exists**, **Whse. Inventory Pick Exists** and **Whse. Inventory Put-away Exists** will only be shown if parameter **Use Warehouse Functionality** in the Inventory Setup is set to **TRUE**.

FastTab General

General			
No.	CONT00001	Status	Ready
Type	Inbound	Status Code	
Container ID	CN-138591-B	Shipping Agent Code	
Description	Fashion Production China ETA 10-03-20	Attached to Container No.	CONT00002
Description 2	Port of Chennai -> Port of London	Lines Attached	☐

Description of the Fields

No.

Here you can enter the internal number of the Container No.

It can be based on the Number Series **Container Nos.** in the Inventory Setup

Type

This field determines what kind of Container No. it is.

You can choose between the following three options:

Inbound	The content of the Container No. is based on Purchase Lines
Outbound	The content of the Container No. is based on Sales Lines or Pick Documents
Transfer	The content of the Container No. is based on Transfer Lines

Container ID

You can enter the External Number of the Container No.

Description and Description 2

You can enter the Descriptions 1 and 2 for this Container No.

Status

The **Status** has the following five options:

<empty>	When you create a new Container No. the Status will be empty. If you want to Attach Lines to a Container No., the status must be <empty>.
Ready	You can set the Status to <i>Ready</i> manually if you are ready with attaching Lines to the Container No. If you again want to change the content of the Container No., you need to change the Status back to <empty>.
Transport	You can set the Status to <i>Transport</i> manually when a Container No. is on Transport. For the Type <i>Inbound</i> and <i>Outbound</i> it will not be updated automatically. For the Type <i>Transfer</i> it will be set automatically after you have posted the Shipment of the Transfer Lines via Container Management.
Posted	This Status will be automatically set to <i>Posted</i> when you post the Container No. or when you post a related Warehouse Document completely. Be aware however, that you cannot change this Status once it is set to <i>Posted</i> .
Partly Posted	The Status will be automatically set to <i>Partly Posted</i> if only part of the Container has been posted. This could be the case if the Container is connected to a Pick Document and you only posted one Order of a Pick Document and not the whole Pick Document or if a Warehouse Document created for the Container is only partly posted.

Status Code

This field is based on the **Status Code** Table and relates to the **Container Workflow** where it is usually maintained. You can also change the **Status Code** manually, but you must be aware that this value can be overwritten by an update based on the Container Workflow.

Shipping Agent Code

You can enter a **Shipping Agent Code** that is responsible for the transport of this Container No.

It will have no consequences for the attached Lines or Orders – it is only informative.

Attached to Container No.

If you have selected the current Container No. as Line to be attached to another Container No., that Container No. will be shown.

Lines Attached

This Boolean is set automatically to *TRUE* when you have attached Sales-/Purchase-/Transfer Lines or other Container Nos. to the Container No.

FastTab Dates

Dates			
Original Shipment Date		Expected Receipt Date	
Shipment Date		Actual Receipt Date	
Actual Shipment Date		Update Receipt Date	
Original Expected Receipt D...		Update Shipment Date	

Description of the Fields

Original Shipment Date and Shipment Date

When you update the Shipment Dates of attached Sales Lines or Transfer Lines, the Field **Shipment Date** of the Container No. will be filled automatically with this **Update Shipment Date**.

If the **Original Shipment Date** is still empty, this field will also be filled automatically with the **Update Shipment Date**.

If you should update the Shipment Dates of attached Lines again, only the **Shipment Date** of the Container No. will be overwritten. The **Original Shipment Date** stays the same, so it will always show the first **Update Shipment Date** that you used to update the Shipment Date of the attached Lines.

Actual Shipment Date

You can enter the Date that the Container No. is actually shipped.

This Date will have no influence on the attached Lines.

Original Expected Receipt Date and Expected Receipt Date

When you update the Receipt Dates of attached Purchase Lines or Transfer Lines, the Field **Expected Receipt Date** of the Container No. will be filled automatically with this **Update Receipt Date**.

If the **Original Expected Receipt Date** is still empty, this field will also be filled automatically with the **Update Receipt Date**.

If you should update the Receipt Dates of attached Lines again, only the **Expected Receipt Date** of the Container No. will be overwritten. The **Original Expected Receipt Date** stays the same, so it will always show the first **Update Receipt Date** that you used to update the Expected Receipt Date of the attached Lines.

Actual Receipt Date

You can enter the Date that the Container No. is actually received.

This Date will have no influence on the attached Lines.

Update Receipt Date

If you want to update the **Expected Receipt Date** of all attached Purchase Lines or the **Receipt Date** of all attached Transfer Lines, you can enter the new Date here.

After entering the Date, you need to carry out the Action **Update Date**.

Update Shipment Date

If you want to update the **Shipment Date** of attached Sales Lines or Transfer Lines, you can enter the new Date here. After entering the Date, you need to carry out the Action **Update Date**.

FastTab Info

Info			
Quantity	44	Net Weight	27
Parcels	44	Volume	
Gross Weight	31		

Description of the Fields

Quantity

This field will be filled with the Total Quantity of the Lines that have been attached.
Keep in mind that if some Items are in Pieces and others in Pairs, Kilograms, Liters, Meters, etc. it will simply be summarized to one Quantity (so no conversions of one Unit to another Unit).
The **Quantity** cannot be changed manually.

Parcels, Gross Weight, Net Weight, Volume

Based on attached Lines the **Parcels**, **Gross Weight**, **Net Weight**, and **Volume** will be calculated by multiplying the Quantity with the information of the attached Lines (Sales, Purchase, and Transfer).
Keep in mind that if some Items have a weight in Kilogram and some in Grams, that it is simply summarized to one Quantity (so no conversions of one Unit to another Unit).
You can however overwrite these values – unless this Container is attached to another Container.

FastTab Filters

The Filters on this FastTab are important when attaching Lines to the Container No.:
See [Filters for Attaching Lines](#)

FastTab Posting

The Fields on this FastTab are important when posting the Container No.:
See [Post a Container](#)

Container Workflow

You can create and maintain a TRIMIT **Workflow** (to-do list) for your Container by clicking **Workflow**.

You can also find the **Workflow Due List** via the Container Card:

If you click ***Related, Container, Workflow Due List*** in the Container Card, the **Relation Filter** in the header of the Workflow Due List will by default be filled with *Container* and the **Relation No. Filter** with the Container No. you were standing on.

If you look for the Container Workflow Due List via **Search (Workflow Due List)**, no Filters will be set by default for the **Relation Filter** and **Relation No. Filter**, so you will see all the steps related to Containers, Masters, Collections, etc.

For more information regarding a TRIMIT Workflow: see ***White Paper – TRIMIT Workflow***.

Attach Lines

After you have created a Container No. you can attach the Sales-/Purchase-/Transfer Lines or other Container Nos. to it.

Before you can attach lines, you need to set the Filters.

Filters for Attaching Lines

It depends on the **Type** of the Container No. (*Inbound*, *Outbound* or *Transfer*) which fields are mandatory and must be filled on the FastTab **Filter**.

Filter	
Filter Vendor/Customer	2300
Filter Document No.	
Filter Date	
Filter Order Type	
Brand Filter	
Season Filter	
Filter From-Location	
Filter To-Location	
Filter Transit Location	
Filter Direct Transfer	☒
Include Containers	☒

For Type = Inbound

You need to enter a filter for the Vendor Nos. in the **Filter Vendor/Customer No.** or a filter for the Purchase Order Nos. in the **Filter Document No.**

A **Filter Date** will be compared with the **Expected Receipt Date** of the Purchase Lines.

A **Filter Order Type** will be compared with the **Order Type** on the Purchase Header.

A Filter on the Global Dimension Code 1 (**Brand Filter**) and a Filter on the Global Dimension Code 2 (**Season Filter**) will be compared to the corresponding fields in the Purchase Lines.

Setting **Include Containers** to *TRUE* enables you to attach other Container Nos. with the **Type Inbound** to this specific Container No.

A Container No. can only be attached once to another Container No.

I.e., I have 1 Sea-Container with 3 Roll-Containers in it. These 3 Roll-Containers can be attached to the Sea-Container, but these Roll-Containers cannot be attached as well to another Sea-Container.

For Type = Outbound

You can only enter filters on Outbound Containers if the parameter **Sales/Container Management** in the Inventory Setup is set to *Via Container Management*.

You need to enter a filter for the Customer Nos. in the **Filter Vendor/Customer No.** or a filter for the Sales Order Nos. in the **Filter Document No.**

A **Filter Date** will be compared with the **Planned Delivery Date** of the Sales Lines.

A **Filter Order Type** will be compared with the **Order Type** on the Sales Header.

A Filter on the Global Dimension Code 1 (**Brand Filter**) and a Filter on the Global Dimension Code 2 (**Season Filter**) will be compared to the corresponding fields in the Sales Lines.

Setting **Include Containers** to *TRUE* enables you to attach other Container Nos. with the **Type Outbound** to this specific Container No.

A Container No. can only be attached once to another Container No.
I.e., I have a Truck (a Container No.) to ship the goods to my customers. In that Truck I have 10 boxes (10 Container Nos.), but these boxes cannot be in another Truck as well.

For Type = Transfer

You need to enter filters for the **From-Location**, **To-Location**, and the **Transit Location**.

The setting of the field **Filter Direct Transfer** is optional and will be compared with the field **Direct Transfer** of the Transfer Orders you want to attach to the Container.

Filter From-Location	BLUE
Filter To-Location	INDIA
Filter Transit Location	OUTLOG
Filter Direct Transfer	☐

A **Filter Date** will be compared with the **Shipment Date** of the Transfer Lines.

A Filter on the Global Dimension Code 1 (**Brand Filter**) and a Filter on the Global Dimension Code 2 (**Season Filter**) will be compared to the corresponding fields in the Transfer Lines.

Setting **Include Containers** to *TRUE* enables you to attach other Container Nos. with the **Type Transfer** to this specific Container No.

A Container No. can only be attached once to another Container No.

Attaching Lines for all Types

After you have set the (mandatory) Filters you can select the Lines that are in the Container No., by clicking **Attach Lines**. I.e., For a new Container No. with **Filter Vendor/Customer No. = 2000**

Container Card

CONT00006

Set Status to Ready

Container Content

Workflow

Container Content

Attach Lines

Update Date

Recalculate Info

Post Container

A list of Documents (Sales- or Purchase- or Transfer Orders) is shown based on the Filters. You can also see Container Nos. of the same **Type** (*Inbound, Outbound, Transfer*) in this list if the field **Include Containers** was set to *TRUE*.

If the parameter **Use Warehouse Functionality** in the Inventory Setup is set to *TRUE*, the Orders (Sales, Purchase or Transfer) also need to have **Status Released** before they will be shown in the **Container Content Selection**.

In case this parameter is set to *FALSE*, you will also see the Orders that have **Status Open**.

Note

We do advise having all the Orders set to **Status Released** before attaching them to a Container No., even if the parameter **Use Warehouse Functionality** in the Inventory Setup is set to *FALSE*, because changing this parameter from *FALSE* to *TRUE* will not check Attached Lines to existing Container Nos. Therefore, you could see Attached Lines by clicking **Container Content** that are not visible via **Attach Lines**.

Now you can determine which Document Lines are in the Container No.

If all the Lines of a Document are in the Container No. you can simply set a checkmark in **Attach**.

In the **Container Content Selection**, you will see that the **Line Selection** is now set to *Marked Lines* (if only part of the Lines has been attached), and the **Quantity**, **Parcels**, **Gross Weight**, **Net Weight**, and **Volume** are recalculated based on the attached Lines.

Container Content Selection											
☒ Edit List ☐ Delete Actions ▾ Related ▾ Fewer options

☐	All Lines	Inbound	Order	PW00004	2000	Sewing & Stitching Ltd.					

Note

In case an Item has an **Item Tracking Code**, it is not possible to determine the Lot Nos. or Serial Nos. in the Attached Lines of a Container No.

Therefore, you need to go to the origin: the Sale-/Purchase-/Transfer Line itself to determine the Lot Nos. or Serial Nos. that are actually in the Container No.

Split Lines for Type = Inbound

If not the total **Outstanding Quantity** of a Purchase Line will be in the Container of **Type Inbound**, but only part of it, you need to split the Purchase Line – because the system can only handle complete Purchase Lines. This can be done in the **Container Content Selection** Page by clicking **Actions, Function, Split Purchase Order Lines**.

This is only possible if the original Purchase Line is not attached yet to a Container No. If you have already attached the Purchase Line to a Container No., but you need to split it, because not all the **Outstanding Quantity** is in the Container No., you need to de-attach the Purchase Line before you can split it.

Note 1

The "Split" function is only available for Containers with **Type Inbound** (Purchase). If the Container is of **Type Outbound** (Sales) or **Transfer** (Transfer) this function is not available. You need to split the original Lines manually. By using the Inventory Setup parameter **Sales/Container Management** with the value *Via Pick* you are easily able to have 'split' Sales Lines attached to a Container.

I.e.: If you only received 9 pieces of Item 21209901 (*Sofia Shirt, Black, XS*) of the Line with 10 Pieces: In the page of **Container Content Selection**, you click **Actions, Function, Split Purchase Order Lines**. In the column **Split Quantity**, you enter the Quantity that you will **not** receive in this Container No.

Container Split Purchase Lines									
Type	No.	Description	Description 2	Location Code	Quantity	Split Quantity	Unit of Measure Code	Expected Receipt Date	Container No.
Matrix	2120	Sophia Shirt		ORANGE	480	0	PCS	3/11/2026	CONT00006
→ Item	21209901	Sophia Shirt	Black, XS	ORANGE	10	1	PCS	3/11/2026	
Item	21209902	Sophia Shirt	Black, S	ORANGE	20	0	PCS	3/11/2026	
Item	21209903	Sophia Shirt	Black, M	ORANGE	30	0	PCS	3/11/2026	
Item	21209904	Sophia Shirt	Black, L	ORANGE	40	0	PCS	3/11/2026	
Item	21209905	Sophia Shirt	Black, XL	ORANGE	30	0	PCS	3/11/2026	
Item	21209906	Sophia Shirt	Black, XXL	ORANGE	20	0	PCS	3/11/2026	
Item	21209907	Sophia Shirt	Black, 3XL	ORANGE	10	0	PCS	3/11/2026	

This split must be confirmed with **Actions, Function, Post Split** or press **F9**.

You will get a question regarding the new **Expected Receipt Date** for the **Split Quantity**:

Dialog

Expected Receipt Date for Split

3/30/2026

OK

Cancel

After pressing the **OK** button, this Date will become the **Expected Receipt Date** for the new Purchase Line that will be created based on the **Split Quantity** (see picture below)

From the original Purchase Line (from which the Outstanding Quantity was 10) the Quantity will be deducted with the **Split Quantity** (and will in this example become 9).

Now, you can attach the Purchase Line (with the **Outstanding Quantity 9** that is in the Container) via **Related**, **Content**, **Lines** or press **F7**.

The information shown in **Container Content** is based on the attached lines to the Container and the information in the original **Document No.**:

- **Quantity:** **Outstanding Quantity** of the Lines attached to the Container No. for a Purchase-/Sales-/Transfer Order and the **Quantity to be Picked** or **Quantity Picked** of a Pick Document that is attached to a Container.
- **Shipped Quantity:** **Shipped Quantity** of the original Sales-/Transfer Line – this field will not be filled if the Origin is a Pick Document!
- **Received Quantity:** **Received Quantity** of the original Purchase-/Transfer Line
- **Invoice No.:** The Posted Purchase-/Sales Invoice on which the Sales-/Purchase Lines have been invoiced or the Posted Pick Document on which the Pick Document Lines have been posted. This field will not be filled if the **Type** of the Container is *Transfer*.
- In the attached Purchase-/Sales-/Transfer Lines itself the field **Container No.** will be filled with the Container No. to which it has been attached.

If you delete the **Container No.** in the Purchase-/Sales-/Transfer Order Lines, this Line will also be de-attached from the **Container No.** again.

Attaching Containers

Suppose that in **Container No.** *CONT00002* there is also a Roll-Container with its own unique **Container No.** *CONT00001*.

In that case you need to create a **Container No.** for this Roll-Container and determine its content, after which you can attach this complete Roll-Container to the **Container No.** *CONT00002*.

The **Container No.** *CONT00001* looks as follows:

☐	All Lines	Inbound	Container	CONT00002	2000	Sewing & Stitching Ltd.	1	1	181	165	

The only criteria for Container Nos. shown in this **Container Content Selection** is that it must have the same **Type** Container (in this case *Inbound*), the **Status** must be empty, and the Container No. cannot be attached already to another Container No.

You can click on the Container No. of the Line to see the **Description** of this Container.

Description

Fashion Production China ETA March 10

Attached to Container No.

CONT00002

Description 2

Port of Chennai -> Port of London

Lines Attached

Note

If you attach a Container B to Container A, the **Quantity** of Container A will be influenced as well: Now it is the pieces of the attached Order Lines + the number of attached Container Nos. So, if you would compare the **Total Quantity** on a Print – like shown later in this white paper – and would compare this to the field **Quantity** of the specific Container it can differ!

Block Lines for Change

If you are finished with attaching Lines and/or Container Nos. to a Container No.: make sure that you change the **Status** into *Ready*.

This means that no new Lines can be attached to the Container No. and that the Container No. can be posted.

If there is a related Container No. attached; the **Status** of this Container No. will also be changed automatically. This also means, that you cannot change the **Status** in a Container No. that has the field **Attached to Container No.** filled – therefore, you have to go to that attached Container No.

If you still need to change the content of the Container No., you can change the **Status** back to <Empty>.

You can set the **Status** manually to *Transport* if you know that the Container No. is on its way.

Print Content

You can print the content of a Container No. by clicking *Container Content*

	Black 1 2 3 3 2 2 1				
	Container No.: CONT00002				
		58			1,415.00

The Document Nos. will only be shown if you did have a check mark in **Show Document No.**

In case, the main Container No. would also include other Container Nos., this will be printed on the report as well.

Therefore, be aware that the content from **Container No. CONT00001** is also shown as the content of **Container No. CONT00002**, but also as the content for **Container No. CONT00001**.

		44			1,023.00	

Therefore, it might lead to confusion in the Warehouse if they need to check the content of *CONT00001* and *CONT00002*.

Containers on Pick Documents

If you have set the parameter **Sales/Container Management** in the Inventory Setup to *Via Pick* it is not possible to attach Sales Lines to a Container No. with **Type Outbound** as described in the previous chapter.

The screenshot shows the 'Inventory' setup window. On the right side, under the 'Pick' section, the 'Sales/Container Management' dropdown menu is set to 'Via Pick' and is highlighted with a red rectangle. Other settings include 'Delete Pick by Posting' set to 'Pick Document Header', 'Set Quantity Picked' set to 'Quantity Picked = 0', and 'Pick Set Await Posting Default' set to 'Ship and Invoice'.

If you do want to enter filters now in a **Container No.** you will even get an error message:

The screenshot shows the 'Container Card' window. At the top, there is a yellow error bar that reads: 'The page has an error. Refresh (F5) to undo the change, or correct the error.' Below this, the 'Filter' section is visible. A dropdown menu for 'Filter Vendor/Customer' is open, showing a validation results popup that states: 'Validation Results: Filters are invalid when sales/container management of the inventory setup has been set to Via Pick.'

If you do try to attach Sales Lines directly in a **Container No.** now, you will get an error message:

The screenshot shows an error message dialog box with a warning icon. The text reads: 'Inventory setup of sales/container management is via pick document.' Below the message, there is a link that says 'How to report this issue >'. At the bottom, there is a feedback section asking 'Was this information helpful?' with 'Yes' and 'No' buttons, and an 'OK' button.

You need to attach a Container No. to an existing Pick **Document No.** if the parameter is set to *Via Pick* and you cannot attach Sales Lines to the Container No. directly.

In a Pick **Document** you can enter a **Container No.**:

Pick Document (PI00001)

Delivery

Shipping Agent Code | Quantity to be Picked (Base) 12.00
 Shipping Agent Name | Container No. (highlighted with red box)

This means that all the Lines of this Pick **Document** will be put in this Container No.
 You could select a Container No. if you already created the Container Nos. with **Type Outbound** or create the Container after pressing **Alt+Arrow Down** (or click the three dots for a Lookup) on the field **Container No.**

If no **Container No.** is present of **Type Outbound**, a message pops-up, otherwise, you can select an existing **Container No.**:

? No outbound containers were found.
 Do you want to create a new container?

Yes No

By clicking **Yes**, the system will create a new **Container No.** of **Type Outbound**, and you are able to edit the information and after clicking **OK**, the **Container No.** will be filled in the Pick Document:

Container List | Search | + New | Edit List

No. ↑	Type ↑	Lines Attached	Whse. Receipt Lines Exists

The **Quantity** in the Container Content is based on the **Quantity to be Picked (Base)** from the Pick Documents.

You can attach several Pick Documents to the same Container No. There is no check if all the related Sales Lines have the same Customer.

De-attach Lines is only possible if you delete the Container No. again in the Pick Document.

If, however, the **Quantity Picked (Base)** is entered on the Pick Document Lines, and it might differ from the **Quantity to be Picked (Base)** from the Pick Document Lines, also the **Quantity** in the **Container Content** of the connected Container No. will be updated.

Differences parameter Sales/Container Management

What are the differences between *Via Pick* and *Via Container Management* for Sales?

Via Pick	Via Container Management
Only Quantity to be Picked quantity on the Container Lines; so partly delivery possible.	Always complete Outstanding Quantity of the Sales Line on the Container Line
Several Pick Documents in the same Container No. possible.	Sales Lines can be attached based on Filters.
No selection of Pick Document Lines is possible; all the lines of the Pick Document will be in the same Container No.	You can select separate Sales Lines to attach to the Container No.
No Container No. in Container No. possible.	Container Nos. can be attached to another Container No. as part of the content.

Note

You can only change the parameter **Sales/Container Management** if no *Outbound* Container Nos. are present with attached Lines that are not posted.

Changing Dates

Using Container Management can help you keep the Dates on the attached Document Lines accurate. Instead of changing individual Receipt/Shipment Dates on the attached Purchase-/Sales-/Transfer Lines you only need to change the Receipt-/Shipment Date on the Container No. and update the Dates of the attached Lines.

Step 1: Enter "Update Shipment/Receipt Date"

First step is to enter an **Update Shipment Date** (for Type = *Outbound* or *Transfer*) and/or an **Update Receipt Date** (for Type = *Outbound* or *Transfer*) on the FastTab **Dates** of the Container.

Dates	
Original Shipment Date	Expected Receipt Date
Shipment Date	Actual Receipt Date
Actual Shipment Date	Update Receipt Date 2/20/2026
Original Expected Receipt Date	Update Shipment Date

Step 2: Update Dates

Now you can click **Update Date** or by pressing the button in the Action pane.

Container Card	
CONT00002	
Set Status to Ready Container Content Workflow Container Content Attach Lines Update Date Recalculate Info Post Container ...	

You will get an extra question to confirm:

Update Expected Receipt Date to 02/20/26
Yes No

Press **Yes**

By clicking **Container Content**, you can see that the Date of the attached Lines has been changed.

Container Card	
CONT00002	
Set Status to Ready Container Content Workflow Container Content Attach Lines Update Date Recalculate Info Post Container ...	

Note

If there are other Container Nos. attached to Container No. for which you now change the Date: for these Container Nos. the Lines will be updated too!

By clicking **Collapse All** you will only see the *Matrix* Lines.

Container Content												
Edit List Expand All Collapse All Related Fewer options												
Container No. ↑	Origin ↑	Document No. ↑	Type	No.	Location Code	Description	Description 2	Quantity	Unit of Measure Code	Shipped Quantity	Received Quantity	Outstanding Quantity
CONT00002	Purchase Order	PU0001	Matrix	2030	BLUE	Ella Trousers		30	PCS			30
→ CONT00002	Purchase Order	PU0001	Matrix	2210	BLUE	Poppy Blazer		28	PCS			28
												Expected Receipt/Sh... 2/20/2026
												Invoice No.
												Actual Container No.
												CONT00001
												CONT00002

On the FastTab **Dates** the fields are now changed as well:

Dates	
Original Shipment Date	Expected Receipt Date 2/20/2026
Shipment Date	Actual Receipt Date
Actual Shipment Date	Update Receipt Date
Original Expected Receipt Date 2/20/2026	Update Shipment Date

The **Expected Receipt Date** is now filled with 2/20/2026 (February 20, 2026).

The **Original Expected Receipt Date** is now filled because it was the first time you updated the Receipt Dates.

If you update the Receipt Date again with 2/25/2026 (February 25, 2026) the result would be:

Dates	
Original Shipment Date	Expected Receipt Date 2/25/2026
Shipment Date	Actual Receipt Date
Actual Shipment Date	Update Receipt Date
Original Expected Receipt Date 2/20/2026	Update Shipment Date

So, the **Original Expected Receipt Date** stays the first **Update Receipt Date** you used.

The **Expected Receipt Date** will always be the last **Update Receipt Date**.

The procedure described is the same for **Update Shipment Date**, **Original Shipment Date** and **Shipment Date**.

The **Actual Shipment Date** and **Actual Receipt Date** can be filled manually before you want to post the Shipment or Receipt.

Posting without BC WM/WMS

You can use the Posting functionality of Container Management to Post the Shipment of the attached Sales Lines or Transfer Lines or to post the Receipt of the attached Purchase Lines or Transfer Lines. This can of course only happen if you do not use the WMS functionality based on the fields in the Location Codes that are used.

Post a Container

To confirm that the **Container No.** is filled correctly with the attached Lines, you need to change the **Status** at least to *Ready*. This can be done by clicking **Set Status to Ready**.

The screenshot shows the 'Container Card' for CONT00002. A toolbar at the top includes icons for edit, share, add, and delete. Below the toolbar, a row of buttons is visible: 'Set Status to Ready' (highlighted with a red box), 'Container Content', 'Workflow', 'Container Content', 'Attach Lines', 'Update Date', 'Recalculate Info', and 'Post Container'.

You can set the **Status** to *Transport* manually when the Container No. is on its way. Now you can post the Receipt/Shipment of the Container No.:

The screenshot shows the 'Posting' FastTab. It contains fields for 'Posting Date' (with a date picker showing 2/24/2026, highlighted with a red box) and 'Posted By'. There is also a 'Posted Date' field.

You can enter the **Posting Date** on the FastTab **Posting**. If you do not, the Posting Date for the Receipt/Shipment will be set to the Work Date, and you will get a message before Posting.

The screenshot shows a warning message dialog box with a question mark icon. The text reads: 'Posting date is not set. The posting date is automatically set to 12/01/25'. At the bottom, there are two buttons: 'Yes' and 'No'.

You can post the Receipt/Shipment of the Container by clicking **Post Container** (or press **F9**) and must choose whether you only want to post the Receipt/Shipment or also want to post the Invoice.

The screenshot shows the 'Container Card' for CONT00002. The 'Post Container' button in the toolbar is highlighted with a red box. Below the card, a dialog box is open with an information icon. It has two radio buttons: 'Receive' (selected) and 'Receive & Invoice'. At the bottom of the dialog box are 'OK' and 'Cancel' buttons.

In case the Container No. is of **Type Transfer** you need to post a Container No. twice: Once for the Shipment from the **Transfer-from Code** to the **In-Transit Code** – after this the **Status** of the Container No. will be automatically set to *Transfer* – and once for the Receipt from the **In-Transit Code** to the **Transfer-to Code** – after this the **Status** of the Container will be set to *Posted*.

Note

Be aware that if you want to post the **Invoice** of an Inbound Container, you probably need to enter the **Vendor Invoice No.** on the original Purchase Order based on the parameter **Ext. Doc. No. Mandatory** in the Purchase & Payables Setup, before you can post the Container No. Otherwise, you will get an error message:

You need to enter the document number of the document from the vendor in the Vendor Invoice No. field, so that this document stays linked to the original.

How to report this issue >

Was this information helpful? Yes No

OK

When posting the Container, the next steps will be carried out:

- Receipt/Shipment/Transfer Shipment/Transfer Receipt will be created and posted.
- Invoice will be created and posted based on the choice you make when posting a Container No. with **Type** is *Inbound* or *Outbound*.
- **Status** of the Container No. will be set automatically to *Posted*.
- **Posted Date** will be filled with the Work Date on which the posting took place.
- **Posted by** will be filled with the User-ID of the person who posted the Container No.

OK

Note 2

You cannot post an Outbound (Sales) Container if the Inventory Setup parameter **Sales/Container Management** is set to *Via Pick*. In that case you need to post the Pick **Documents** individually.

Post a Document

When Lines are attached to a Container No. you cannot post them anymore in the original Document if there are no Warehouse Documents (Warehouse Receipt/Shipment or Inventory Pick/Put-away) involved.

The only exception is a Container No. that is connected to a Pick Document, where you are able to post only one of the Orders in a Pick Document or only one of the Pick Documents with the same **Container No.** or individual Lines of a Pick Document.

Some examples:

- If 2 Pick **Documents** are attached to the same **Container No.**, and you would only post 1 of the Pick Documents the **Status** of the Container No. will automatically be changed to *Partly Posted*. If all the Pick Documents that are attached to a Container No. are posted the **Status** will automatically be set to *Posted*.
This can only happen if the Inventory Setup parameter **Sales/Container Management** is set to *Via Pick*, because this is the only way to attach Pick Documents to a Container No.
- If there are more than 1 Sales Order on a **Pick Document**, you can also post the Shipment/Invoice based on a Pick Document Per Order – so only for 1 Order and that would set the **Status** of the Container No. to *Partly Posted*. If all the Orders in the Pick Document are posted the **Status** will automatically be set to *Posted*.
- If Sales-/Purchase Order Lines are attached to a **Container No.** and you want to post the Receipt/Shipment directly via the original Order, you will get an error message. I.e.:

Error Messages			
Home Open related record			
Accept recommended action Hide fixed errors			
Description	Recommended action	Message Type	Status
Item 21202001 line 12460 is related to Container No. CONT00006 and must therefore be recieved via the Container	⋮	Error	

- If Transfer Order Lines are attached to a **Container No.** and you want to post the Receipt/Shipment directly via the original Transfer Order, you will get an error message. I.e.:

! Item M200001 line 20000 is related to Container No. CONT00004 and must therefore be transfered/posted via the Container

Posting with BC WM/WMS

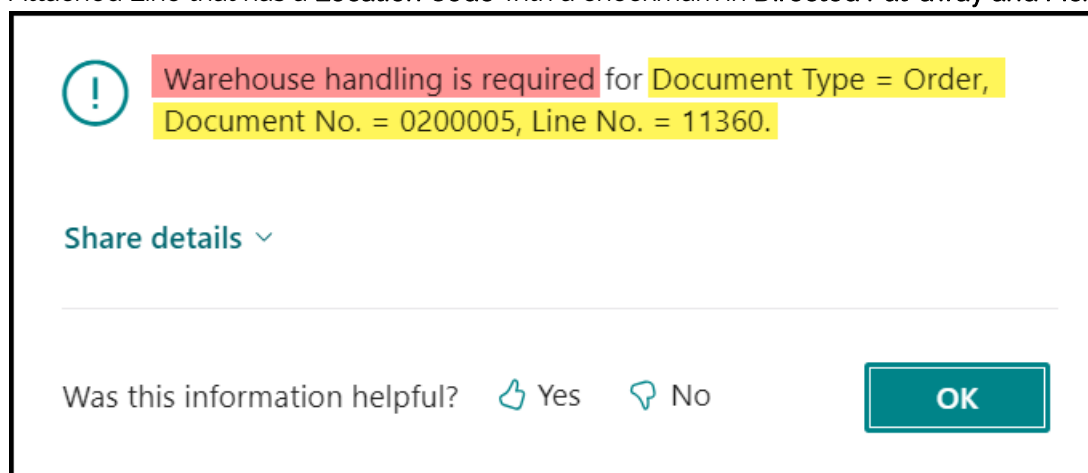

This Chapter is only applicable if **Use Warehouse Functionality** in the Inventory Setup is set to *TRUE*.

Locations with Directed Put-away and Pick

You cannot use the Posting functionality in a Container No. to Post the Shipment of attached Sales Lines or Transfer Lines or to post the Receipt of attached Purchase Lines or Transfer Lines if the **Location Code** on Attached Lines have a checkmark in **Directed Put-away and Pick**.

In that case, when you want to Post the Container, you will get an error message that refers to the first Attached Line that has a **Location Code** with a checkmark in **Directed Put-away and Pick**:

Therefore, you need to create a **Warehouse Receipt** or **Warehouse Shipment** via **Actions, Warehouse, Create Whse. Receipt/Shipment**.

After that, you can see the created **Warehouse Receipt** or **Warehouse Shipment** via **Related, Warehouse, Whse. Receipt Lines** or **Whse. Shipment Lines** and need to handle the Posting in those Warehouse Documents.

After Posting the Warehouse Documents, the Status of the Container No. will also be set to *Partly Posted* if only a part of the Quantities is posted, or to *Posted* if the total Warehouse Document is posted.

After posting only part of a Warehouse Document, you can see this in the Container Content. I.e.:

Container Content

Locations without Directed Put-away and Pick

If **Location Code** on the Attached Lines of a Container No. do not have a checkmark in **Direct Put-away and Pick** but might have checkmarks in **Require Receipt** or **Require Shipment**, it is possible to post the Container No. without any extra messages.

In a Purchase Order, you would get an extra message if you would i.e., enter a **Quantity to Receive** in a Line with a **Location Code** that has a checkmark in **Require Receipt**, but you are able to do so and Post the Receipt/Invoice of this Purchase Order without creating a Warehouse Receipt.

When Posting Container No. with this setup for the **Location Code** in the attached Lines, you can simply post it without any messages.

If a **Bin Mandatory** was set on the Location Code, but you entered a **Bin Code** on the original Sales-/Purchase-/Transfer Line you can post the Container No.

If a Location Code has set the **Require Pick** or **Require Put-away** set to *TRUE* but does not have the **Require Receipt** or **Require Shipment** set to *TRUE*, you usually would create an Inventory Pick or -Put-away.

But also, that is not necessary if you work with Containers.

In that case, you can post the Container No. without any issues.

Summary:

You can post the Container No., regardless of most of the settings in the Location Codes of the attached Lines.

But of course, we do recommend doing it the proper way, by creating a **Warehouse Receipt/Warehouse Shipment**, or by creating an **Inventory Pick/Inventory Put-away** via **Actions, Warehouse, ...** in the Container No.:

and handle them the proper way, which will also change the **Status** of the Container No. itself.

Note

The connection between an Order Line and a Container No. is not in a separate Table. The content of a Container No. is determined by the field **Container No.** in the original Order Lines.

If an Order is completely invoiced and deleted, the system determines the Container Content based on the **Container No.** in the Posted Invoice Lines, Posted Pick Document Lines, or Posted Transfer Lines.
